About the Zimbabwe Election Support Network

The Zimbabwe Election Support Network (ZESN) is a coalition of 36 non-governmental organizations formed to co-ordinate activities pertaining to elections. The major focus of the Network is to promote democratic processes in general and free and fair elections in particular. ZESN was also established to standardize the NGOs' election-related activities and methodology, as well as to ensure wider geographical coverage and co-ordination of activities. The broad aim of the Network is therefore to enhance the electoral process in Zimbabwe in order to promote democracy and good governance in general, and free and fair elections in particular, whilst adhering to internationally acceptable standards. The vision of ZESN is a Zimbabwe where a democratic electoral environment and processes are upheld and its mission is to promote democratic elections in Zimbabwe.

The objectives of ZESN are:

- To enhance citizen participation in issues of governance and democracy
- To promote democratic free and fair electoral processes through objectively and impartially monitoring and observing elections
- To promote the creation of a legal framework and an election culture for free and fair elections.
- To effectively gather, disseminate and communicate objective information about elections and other democratic processes.

In pursuing its vision, mission and objectives, ZESN is guided by the following values:

- Democratic, free and fair elections
- Secrecy of the ballot
- Democracy
- Mutual respect and tolerance
- Respect for human rights
- Transparency
- Accountability
- Peace
- Informed citizen participation
- Non-discrimination
- Gender equality
- Gender sensitivity
- Non-partisanship

Acknowledgements

ZESN expresses its heartfelt gratitude to the field enumerators and supervisors who dedicated time and effort to conduct the field tests. ZESN is also indebted to its Technical Partners the National Democratic Institute (NDI) and independent consultants from Kenya and Zimbabwe who assisted

with the Computer Audit. ZESN also greatly appreciates financial support from the European Union, without which it would have been impossible to conduct the Audit. ZESN is indebted to its Secretariat who spent relentless hours working on the project.

Executive Summary

The ZESN conducted an audit of the 2018 Biometric Voter Registration (BVR) voters' rolls. The audit was conducted to provide independent non-partisan information on the quality of the 2018 PVR and the 2018 FVR to all stakeholders, including: the ZEC, political parties, civic organizations, and citizens. The methodology of the voters' roll audit encompassed conducting computer audits, people-to-list and list-to-people field tests. ZESN examined accuracy, currency and completeness of the voters' rolls provided.

ZESN conducted the audits for voters roll released in electronic format by the Zimbabwe Election Commission (ZEC) on 16 June 2018 and the 25th of July 2018. ZESN notes that unlike in past elections the ZEC, provided an electronic copy of the 2018 FVR to stakeholders in accordance with the Electoral Act (Chapter 2:13) as provided for in Section 21 (7) which prescribes that where a voters' roll is provided in electronic form, its format shall be such as allows its contents to be searched and analyzed.

The 2018 FVR will play a critical role in the conduct of the 2018 harmonized elections. It will be used to determine who is able to vote and who is not on Election Day. Errors on the 2018 FVR regardless of whether they are intentional or not could prevent eligible individuals from voting, or enable illegal voting. Further systematic problems that affect particular groups of individuals can fundamentally undermine the credibility of an election. While no voters' roll is perfect, if the 2018 FVR is widely perceived as accurate, current, and complete it will enhance confidence in the overall process for the 2018 harmonized elections.

Understanding the quality of the 2018 FVR is particularly important given serious challenges identified with the 2013 preliminary voters roll (PVR). Analysis of the 2013 PVR showed a clear pattern of over registration in rural areas and with older voters and under registration in urban areas

and with younger voters. These issues undermined the credibility of the 2013 harmonized elections.

In terms of accuracy, the 2018 PVR has complete data for all registrants and few obviously duplicate registrants, but potential errors were identified related to identifying information (in particular date of birth data for registrants in Mashonaland Central). In terms of currency, the overall number of registrants decreased form -3%. The percentage of new, first time registrants is 43%. Urban registrants increased from 28% to 33%, but registrants for Bulawayo decreased by -14%. Female registrants increased from 52% to 54%. The number of registrants 18 to 22 increased by 372% and those 23 to 27 increased by 83% while the number of registrants 93 to 97 decreased by -91% and those 98 or older decreased -94%.

The analysis also compared the 2018 FVR voters' roll, with the 2018 PVR and ZimStats 2018 projected census figures. On the whole, the registered voter population of 5,695,706 is lower than both the eligible voters deduced from the 2012 census population (6,805,455) as well as those from the 2018 census projections (7,224,128). However, there is a marginal increase of 0.21% in the number of registrants from 5 683 936 reported in the 2018 PVR to 5 695 706 in the FVR. However, the majority (80.40%) of these additions are found in Mashonaland West province. Of the total adult population of registrants contained in the FVR, roughly 54% are women and 46% are men. The majority (68%) of registered voters reside in rural Zimbabwe compared to 32% who stay in urban areas. The analysis managed to flag out a number of records that belong to suspected multiple registered individuals. There are also a few strange cases where the FVR registrants are more than the official 2018 adult population projection.

In addition, ZESN also conducted complementary field tests audit of the 2018 FVR. The field test audit had two components: a list-to-people test which

involves randomly identifying individuals from across the country on the 2018 FVR and then deploying enumerators to locate the sampled individuals and verify their registration information; and a people-to-list test in which enumerators randomly select individuals from across the country and request their registration information and then compare this to what is in the 2018 FVR. From the field tests ZESN notes that there is a high level of consistency in entering data of registrants on the voters' roll. ZESN could not locate 8.3% of respondents, who were unknown at address given in the voters' roll.

The findings of these audits provide an overall assessment of the 2018 FVR. Overall, ZESN's audit found that the 2018 FVR is an improvement over the 2013 PVR, but that challenges remain. ZESN's computer audit found a wide variety of mistakes in the 2018 PVR and 2018 FVR. While every voters'

roll contains inaccuracies, more could have been done to clean the 2018 FVR. ZESN's computer audit found that while registration rates for urban and young voters on the 2018 FVR have increased significantly from the 2013 PVR, concerns remain about under registration in urban areas and with younger voters relative to registration rates for rural and older voters. While the ZEC allocated additional BVR kits to rural areas that lead to high registration rates for rural and older voters, the ZEC did not, despite requests, make similar efforts to ensure higher registration rates for urban and young voters. This disparity undermines the inclusiveness of the elections.

However, registration rates for urban areas and younger registrants continue to lag behind those of rural areas and older registrants in both the 2018 FVR and 2018 PVR – though not as much as in the 2013 PVR.

Recommendations

The ZEC released the 2018 FVR too late in the process to address any shortcomings identified for the 2018 harmonized elections. Had the 2018 PVR been released in electronic format earlier or had the ZEC made more detailed information available in electronic format at the end of each phase of the BVR process then a computer audit could have been conducted much earlier and recommendations could have been offered in a timely fashion to enhance the inclusiveness of the BVR process and the quality of the resulting 2018 FVR. This could have helped build public confidence not only in the 2018 FVR, but also in the ZEC itself in advance of Election Day.

Based on our analysis of the 2018 FVR, ZESN offers the following recommendations for future voter registration processes:

- The ZEC should equitably distribute BVR kits to urban and rural areas,
- The ZEC should ensure that all eligible voters are given the opportunity to register to vote as the current voters' roll exclude 21% of potential voters.
- The ZEC and civic organizations should conduct more targeted voter education and voter registration activities targeting young voters between the ages of 18 to 32;
- The ZEC should provide more timely detailed registration information in electronic format for each phase of the BVR process;
- The ZEC should compare registration information across voters' rolls to identify possible errors;
- The ZEC should also explain what constitutes a material or immaterial error on the voters' roll, in order to prevent disenfranchisement of registrants whose registration details might have errors;
- The ZEC should consider posting voters' rolls outside inspection centres to allow for public scrutiny for removal of ineligible voters by reason of non-residence, or death;
- The ZEC should further clean the voters' roll by, investigating all unusual entries and removing duplicate entries;
- Achieving a credible voters' roll should be possible if ZEC continues to invest in good data management and analysis skills to deal with complex nature of the voters' roll data;
- ZEC needs to check out strange instances where the registered voters exceed projected population figures especially for age groups above 39 years.

Legal Framework

The 2013 Constitution ushered in a new dispensation in electoral management in Zimbabwe, by moving critical voter registration activities from the Registrar General to the ZEC. According to Section 239 of the Constitution the ZEC has the function to conduct elections and they must 'ensure that those elections ...are conducted effectively, freely, fairly, transparently and in accordance with the law.' This section also mandates ZEC to register voters, compile voters' rolls and registers and to ensure the proper custody and maintenance of voters' rolls and registers.

According to section 36A of the Electoral Act Chapter 2:13 the President on advice of the Commission 'may at any time proclaim in the Gazette order that there shall be a new registration of voters'. Hence, on the 9th of September of 2017 the then President, R.G. Mugabe proclaimed that BVR would start on the 14th of September of 2017. BVR technology uses physical features, which are unique to every individual for purposes of identification. These physical features include fingerprints, facial scans, voice recognition and other features, which are unique to each person ... the BVR system helps to create a more accurate system of identification and eliminates the problem of duplications, which has blighted previous voters' rolls and elections.¹ The ZEC went further to issue Statutory Instrument (S.I) 85 of 2017 'Electoral (Voter Registration) Regulations' to set out the voter registration regulations and procedure.

Requirements for Registration

According to schedule four of the Constitution a person can register as a voter if they are 18 years or over and a Zimbabwean citizen. The Constitution allows for additional requirements to be added by the Electoral law but these must be consistent with section 67 of the Constitution which guarantees every citizens' right to participate in electoral processes. Therefore, in accordance with Schedule four, the Electoral Voter Registration Regulations provided for additional regulations. Section 4 of the regulations states:

4. For the purposes of registering as a voter any one of the following documents which legibly show that the claimant is a citizen of Zimbabwe of or over the age of eighteen years shall constitute proof of identity and citizenship-

- (a) a national identity document, that is to say, an identity document in terms of section 7(2) of the National Registration Act [Chapter 10:17]; or
- (b) a.. waiting pass", that is to say, a notice in writing in terms of section 7(1) of the National Registration Act [Chapter 10:17], which includes a photograph of the bearer; or
- (c) a valid Zimbabwean passport.

According to section 23 of the Electoral Act for a person to be registered as a voter in a constituency, they must be resident in that constituency unless they intend to run as a member of parliament for that constituency that they are not resident. The Act further states that the commission may prescribe documents that shall constitute proof of residence. In line with the Act Section 5 on the regulations set out the documents that would suffice as proof of address.

5. (1) For the purposes of registering as a voter the following documents shall constitute proof of residence-

- (a) title deeds or a certificate of occupation;
- (b) a lodgers permit issued by the relevant local authority;
- (c) rates, water, electricity, telephone or credit store statements on which is shown the claimant's name and physical address;
- (d) a statement from the landlord, parent or friend of the claimant confirming that the claimant resides at the stated place of residence accompanied by any of the documents in paragraph(a), (b) or(c) in the name of the landlord, parent, friend or such other person at whose residence the claimant resides;
- (e) a statement confirming that the claimant resides at the stated place of residence made by the head of a school, hospital or

¹ZESN Biometric Voter Registration Observation Report Available <http://www.zesn.org.zw/wp-content/uploads/2015/10/ZESN-BVR-Observation-Report.pdf>

- other public institution where the claimant resides;*
- (f) a statement confirming that the claimant resides at the stated place of residence made by or on behalf of the person in whose name a mining location is registered in the area where the claimant resides;*
 - (g) a statement by the claimant's employer confirming his or her address;*
 - (h) a confirmation letter by the relevant councillor, village head, headman or Chief confirming that the claimant resides in the ward he or she claims to reside in;*
 - (i) a continuation letter by farm owner or resettlement officer confirming that the claimant resides in the ward he or she claims to reside in;*
 - (j) an offer letter proving that the claimant is in lawful occupation of the land to which the offer letter relates;*
 - (k) a hospital bill or a clinic or hospital card or an envelope with post office markings reflecting the claimant's address.*

While the ZEC tried to be extensive in stating what constitutes proof of residence, it was still argued that this requirement was prejudicial to some who were unable to attain any of the said documents. Many raised the issue that it was cumbersome and discouraged some from registering to vote².

Registration and Inspection of the Voters' Roll
Section 17 of the Electoral Act states that, 'Voter registration shall be conducted on a continuous basis so as to keep the voters' roll up to date.'¹ This means that voter registration should happen throughout the electoral cycle. Once the roll has been compiled the Act stipulates that it is open to be inspected by anyone. Section 21 stipulates that the voters' roll is a public document and open to inspection by the public, free of charge during ordinary office hours. While inspecting without removing it a person is free to make notes and the commission shall within a reasonable period provide any person who requests it and pays the prescribed fee, with a copy of the voters roll, including a consolidated roll³.

The commission is also obliged to provide the voters' roll to every political party that intends to contest

the election, any accredited observer who requests the voters' roll after paying the prescribed fee, a copy of the voters roll, including a consolidated roll. The Act also stipulates that within a reasonable time after nomination the commission shall provide every candidate one copy in electronic form for which the candidate is nominated or upon payment of the prescription fee, a candidate shall receive a printed copy of the voter's roll which the candidate has been nominated. The Act also adds that where a voters roll is in electronic form should be in a format that can be searched and analysed but should be in a form that does not allow it to be altered.

The inspection process as conducted by ZEC fell short of the requirements of the Act. The law clearly stipulates that the voter's roll is a public document and open to inspection by the public. However, during the inspection period ZESN observers noted that:

The voters' roll was not posted for inspection outside Inspection Centers (ICs) and people could only check their names by handing their identity documents to the inspection staff. The impact of this is that voters could not check for friends or family or provide objections to the Inspection Center staff. This public scrutiny of the roll is important for removal of ineligible voters by reason of multiple registration, death or non-residence. Apart from the fact that the voters' roll was not displayed for public inspection, the major problem witnessed was shortage of some of the materials required to make changes or add new registrants to the voters' roll. Observers encountered ICs where the Voter Registration Data Correction Form (VR 1) and Transfer Form (VR 3) were missing 15% of the time. This was high especially at the beginning of the inspection period⁴.

De-duplication process

The Act states in Section 32 that The Commission shall ensure that no person is registered as a voter more than once on the voters roll for any one polling station. However, in the event that 'the Commission is satisfied that a voter is registered more than once on the voters' roll for any polling station, the

²Available <https://www.herald.co.zw/residents-say-no-to-proof-of-residence-for-bvr/>

³Section 21 of the Electoral Act

⁴<http://www.zesn.org.zw/wp-content/uploads/2015/10/ZESN-Report-on-the-Inspection.pdf>

Commission shall remove the duplicate or multiple names of the voter so that the name of that voter appears only once, and on the appropriate polling station voters' roll.⁵

The Act further states that no notice is required to be given of the Commission's action before or after removing any duplicate or multiple names of any voter. Section 35 states that if a voter is aggrieved by the removal from the Act, they can appeal against the decision to a designated magistrate in their province. The history of duplicates with previous

voters' rolls makes this development welcome. It is imperative that the ZEC removes all duplicates on the voters' roll and keep a clean voters' roll which is accessible. However, 'the stipulation that no notice has to be given is contrary to the tenets of administrative justice as a voter should have the opportunity to make representations before his/her name is removed from the roll, and not after. Though there is an option of appealing to a designated magistrate of the province, depending on timing it may be too late to get the name enlisted back on the voters' roll⁶.

⁵Section 32 of the Electoral Act 2:13

⁶Analysis of the Electoral Amendment act of 28 may 2018 and Outstanding Reforms ahead of the 30 July 2018 elections'

Objectives

The voters' roll audit was guided by the following objectives:

- To increase trust and citizen confidence in the conduct of the 2018 elections
- To increase credibility of the 2018 BVR voters' roll
- To independently verify the quality of the 2018 voters' rolls.

Measurement Criteria

Accuracy relates to the rate of error in entering data on the individual voter, that is, name, date of birth, gender, identification number, etc.

Completeness relating to the proportion of eligible voters included on the voters' roll.

Currency relates to whether the information on the voters' roll is updated, for example through transfers for those who have moved to a new location and removals of records of persons who are no longer eligible to be voters for example are deceased, non-residents or multiple registration.

Methodology

A Voters' Roll Audit (VRA) is a systematic and scientific assessment of the quality of the voter registry. An audit is a method that is used by independent election observers around the world and has been proven reliable and accurate internationally. Verification of the accuracy of a voter registry in the form of a VRA can help to detect and deter electoral fraud, correct administrative errors and promote broad public confidence in the process on Election Day and beyond. The goal of this VRA is to increase citizen trust and public confidence in the conduct of the 2018 harmonised elections and to increase credibility of the 2018 BVR voters' roll.

Computer Audit

One method for examining the accuracy, comprehensiveness/ completeness and currency of the voter register is a computer audit. The computer audit was used to assess both the internal and external consistency of the voters' roll. The computer test analysed variables that include

registration by age of voters on election day, gender, province and setting (urban and rural) by making comparison with national population figures and by making a comparison with the 2013 PVR.

People-to-list

The people-to-list test, involves selecting individuals at random and then determine if those individuals are listed in the voters' roll and if so, whether the information is correct. A representative sample is used to select individuals. The test captures people who should be on the voters' roll, but whose names are missing. The test also determines what proportion of the eligible voting population is on the voter registry.

List-to-people

The list-to-people test identifies the extent to which the voters' roll is bloated with the names of non-existent or ineligible voters. The test captures people who are on the voters' roll but should not be. The test ensured that every name on the voters' roll was that of an actual person eligible to vote and that his/her information, such as address, was correct and up-to-date. This method involved randomly selecting names from the voters' roll and then sending out enumerators to locate the selected individuals, confirm their existence and the accuracy of the registration information (name, gender, date of birth, identification number etc.) of the individual.

Sampling

List-to-people

A nationally representative sample of 1,200 was drawn from the voters' roll from a sample universe of 5,683,936 million registered Zimbabweans. The field tests were conducted using the 2018 PVR. The sample was stratified by province and rural/urban domains. The sample was allocated using Probability Proportionate to Size (PPS) into the 10 provinces of Zimbabwe. The total number of people in the voters' roll in each province was used to allocate (measure of size) a sample of 1,200 individuals in the ten provinces of Zimbabwe. Within each province the allocated sample was further allocated into rural and urban areas using the proportions of populations in the rural and urban areas of the province in the voters' roll.

Table 1: Allocation of the sample: Province and Rural/ Urban

Province	Urban	Rural	Total	Total Sample	Urban Sample	Rural Sample	Total Percentage Targeted	% Sampled Individuals
Bulawayo	258,690	0	258,690	55	55	0	5	5
Harare	900,300	0	900,300	190	190	0	15	16
Manicaland	128,959	604,334	733,293	155	27	128	13	13
Mash Central	23,609	508,255	531,864	112	5	107	9	9
Mash East	63,614	569,512	633,126	134	13	121	11	11
Mash West	155,853	489,121	644,974	136	33	103	11	11
Masvingo	58,501	558,703	617,204	130	12	118	11	11
Mat North	44,113	294,738	338,851	71	9	62	6	6
Mat South	38,847	225,313	264,160	56	8	48	5	5
Midlands	206,012	555,462	761,474	161	43	118	14	13
Total	1,878,498	3,805,438	5,683,936	1,200	395	805	100	100

After the sample was further classified into rural and urban domains in each province, then constituencies were randomly selected from which individuals were randomly selected. Stratification reduces the likelihood that registered individuals from particular provinces or belonging to particular districts and constituencies are left out of the sample.

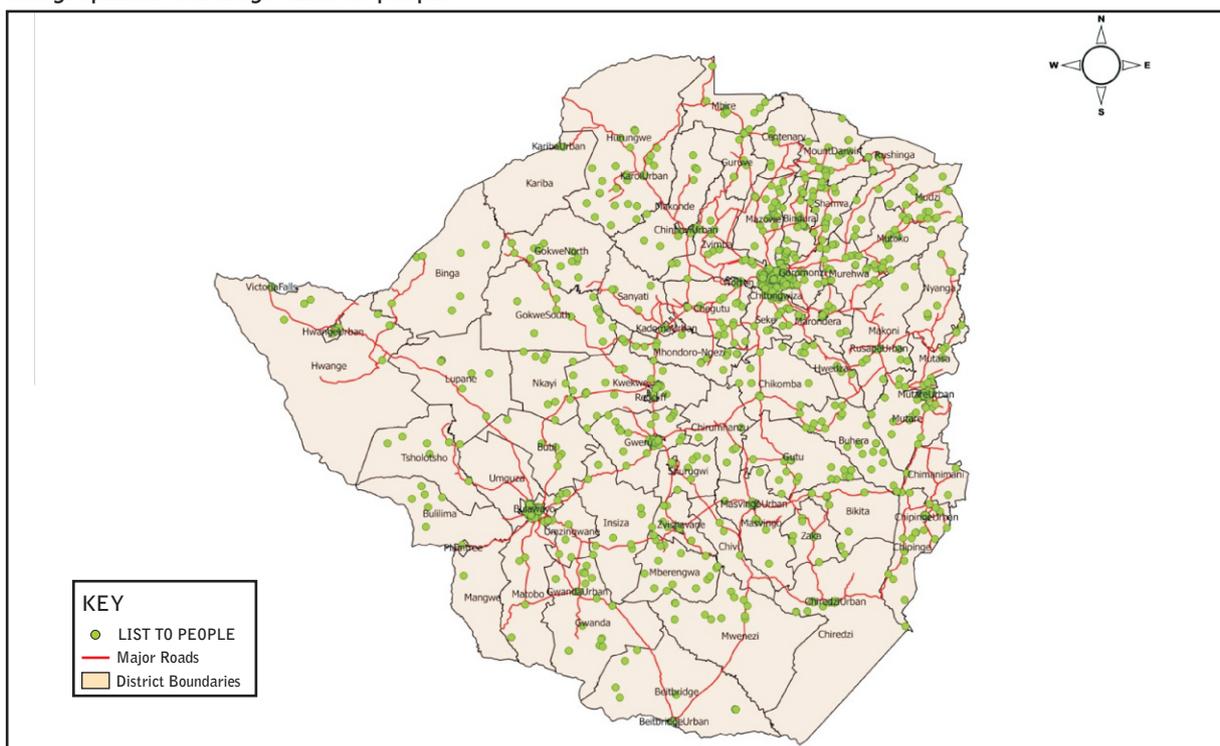

Stratifying further into constituency would not make much sense since the sample is small. Because the number of people within such a constituency would be the measure of size it meant that smaller constituents might not get anything. With a sample

size of 1,200, ZESN is able to make inferences of the population of registered voters with a margin of error of margin +/-3% at a 95% confidence level.

To ensure that the list-to-people sample was representative in terms of gender - 54% of individuals selected were women and 46% were men. The list-to-people sample was also stratified by urban/rural with 67% of sampled names selected from rural areas and 33% selected from urban areas.

ZESN therefore reached 1,063 respondents, 481 males and 582 females.

Geographical Coverage: List-to-people

Map illustrating coverage of the list-to-people test

People-to-list

The sample was based on the projected population of adult Zimbabweans aged 18 plus (see table 2 below), that is the voting population up to 2018. The 2012 population census data was used as the base population to project the 2018 voting population. The survey sample was designed to be representative of Zimbabwe and is stratified by urban and rural strata, province and district. The sample was allocated using PPS; the measure of size being the 2018 18+ projected population of provinces.

PPS was also used to select enumeration areas (EAs) from Zimbabwe Sampling Frame (developed after the 2012 census). The measure of size for EAs during selection was number of persons as per the projected population census. The table below outlines the allocation of enumeration areas for the 10 provinces.

Table 2: Allocation of Enumeration Areas

Province	Urban EAs	Rural EAs	Total
Bulawayo	11	0	11
Manicaland	5	19	24
Mash Central	1	16	17
Mash East	3	17	20
Mash West	6	16	22
Mat North	1	9	10
Mat South	1	9	10
Midlands	7	16	23
Masvingo	2	18	20
Harare	34	2	36
Total	71	122	193

193 enumeration areas across the country were selected at random. For each sampled enumeration area, enumerators were instructed to identify eight individuals for the people-to-list using the lucky draw method. For the people-to-list enumerators were instructed to identify 50% female and 50% male respondents. In total, the people-to-list sample should have included 1,544 respondents of whom 722 were women and 722 were men. In reality, the enumerators were able to conduct a total of 1,518 interviews for the people-to list test of which 55% of the respondents were women and 45% were men.

The table below shows the number of actual interviews conducted for each province.

Table 3: Number of interviews conducted

Province	% Registrants	Sampled Individuals	% Sampled Individuals
Bulawayo	5	90	6
Harare	16	300	20
Manicaland	13	191	13
Mash Central	9	138	9
Mash East	11	168	11
Mash West	11	150	10
Masvingo	11	170	11
Mat North	6	60	4
Mat South	5	81	5
Midlands	13	170	11
Total	100	1,518	100

Primary sampling units (PSU)

At the first stage the sampling frame is made up of EAs. EAs are the smallest geographical units that consist of about 100 households. Each EA has a unique 10-digit geo-code that reflects the province, district, ward and land use sector in which it is located. For the purpose of survey, the sampling frame excludes non-household population, people residing on state land (national parks, safari areas, etc.) and in institutions, and these account for less than one percent of the population.

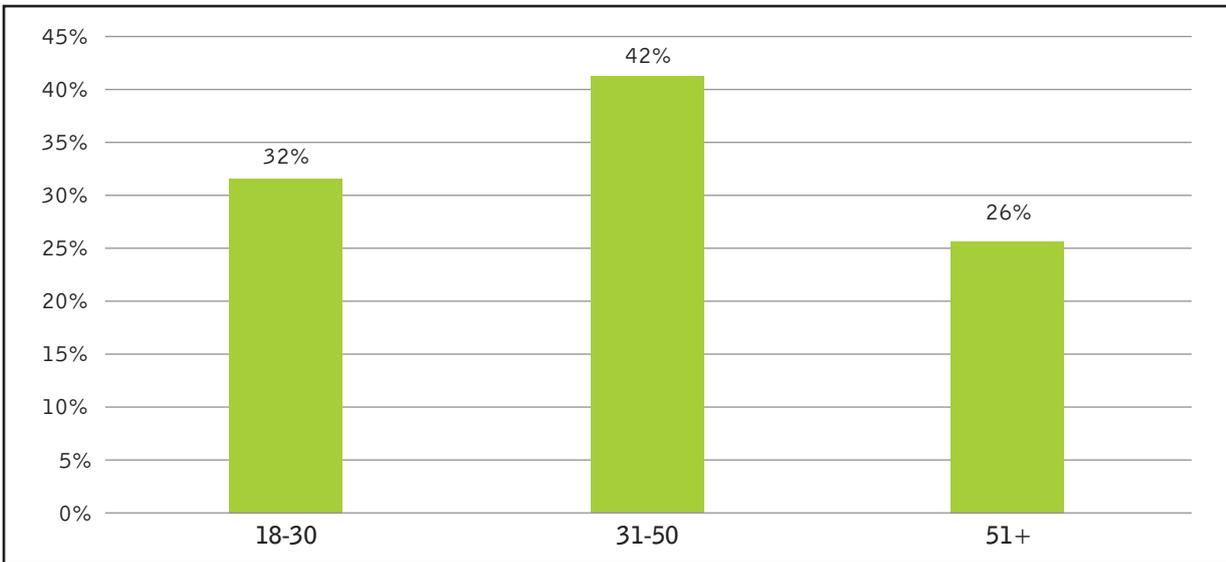

Secondary sampling units (SSU)

Two approaches were considered. The first one requires that, prior to every survey, a list of households in the selected EAs is established. This is used as the frame for the second stage systematic selection of households. However, because, there was no list of households for this stage of sampling, Systematic Random Sampling was used to select 8 households in each EA. The enumerators used a 5/8 interval to randomly select households in the urban areas. This entailed skipping the 5 households, with counting starting from the right for the first house and the second house the enumerators would skip 8 households. In the rural areas because of distance and that the households are not linear, the enumerators skipped every 3rd house. Respondents were selected using simple random sampling or lucky draw.

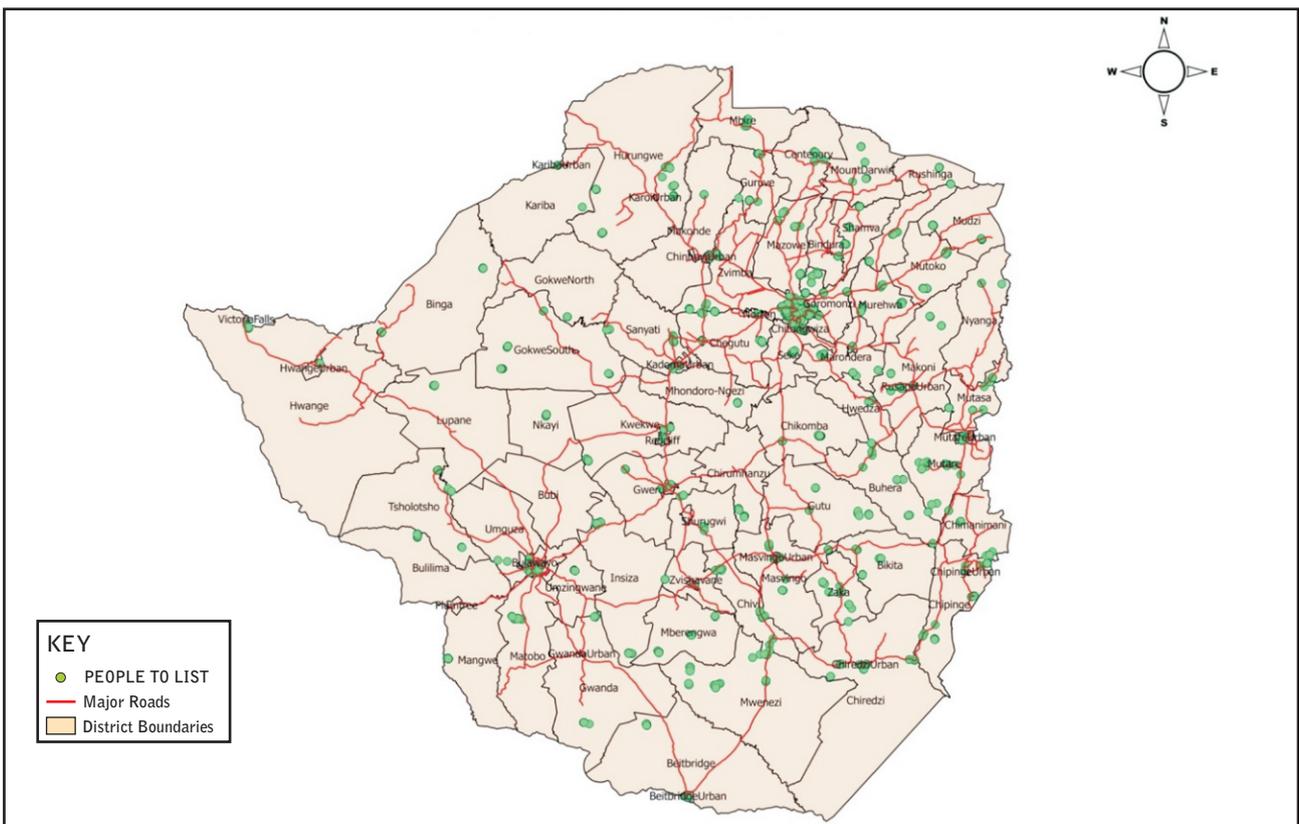

Respondents age: People-to-list

The people-to-list test ended up targeting 32% of respondents in the 18-30 cohort, 42% in the 31-50 category and 26% of the respondents belong to the 51+ age grouping.

Chart 1: Respondents age

Geographical Coverage: People-to-list

Map illustrating EAs where people-to-list interviews were conducted

Quality Control and Data Analysis

Quality control

In order to ensure quality control, the following measures were taken:

- Each team was allocated a supervisor who had to assist with identification of EAs. The Supervisor also had to randomly back-check households where interviews were conducted. This proved useful as a means of ensuring that enumerators comply with sampling procedures for both households and individuals.
- Teams conducted daily de-briefing sessions to discuss field challenges, what went well, lessons learnt and to plan for the next areas. Supervisors had to submit a daily field work report at the end of the day informing ZESN on any field work related problems and challenges.

- ZESN also conducted spot checks to assess whether there was proper identification of EAs, sampling and other challenges
- The database was constantly monitored and enumerators and supervisors were requested to verify any inconsistent data.

Data Collection and Analysis

Field enumerators were deployed for 8 to 12 days to conduct field work. Data collection was done using Open Data Kit (ODK) Collect.

Data was analysed using R⁷, Statistical Package for Social Sciences (SPSS) v 24, Excel, QGIS and ARCGIS 10.3 to produce graphs, tables, charts and maps.

Limitations and Challenges

During data collection, ZESN faced a number of constraints that posed difficulties in the data collection exercise. These included:

i. Locating voters'- list-to-people

It was difficult to locate registrants who had migrated/moved to other areas, as it was difficult to obtain details of their new location. It was also difficult to locate female registrants, especially those residing in the rural areas, who are primarily called by their husbands surnames or by names of their first-born children, as a customary practice, yet they are registered in their maiden names. In most cases the ZESN team of enumerators would seek the assistance of the village head, with a register of people resident in his/her village.

ii. Political Context

Whilst, space has opened up in the past months, the data collection was carried out during an election period. In places where campaigns and rallies were being conducted by political parties it was difficult to locate both people-to-list and list-to-people respondents, as they would be attending political party campaign and rally events. Additionally, not

all communities were receptive to the ZESN enumerators, for example Mudzi in Mashonaland East.

The ZESN enumerators, also encountered incidences where respondents requested them to seek permission to conduct the interviews from Village heads, chiefs and ward chairpersons of political parties. Hence the enumerators ended up spending more time than planned, in the affected areas seeking for approval.

iii. Limited time

The data collection was conducted within a limited timeframe, therefore piloting could not be conducted and a smaller sample was selected for both field tests.

iv. Missing data

The absence of data effectively reduced the sample for analysis. ZESN, had targeted 1,544 and managed to obtain responses from 1,518 for the people-to-list test. For the list-to-people ZESN had targeted 1,200 and managed to locate 1,063.

⁷R is a free software environment for statistical computing and graphics. It compiles and runs on a wide variety of UNIX platforms, Windows and MacOS, < <https://www.r-project.org>>

Computer Audit of the 2018 Preliminary Voters' Roll (PVR)

Description

Number of Registrants

The total number of registrants in the excel files provided by the ZEC containing the 2018 PVR is 5,683,936. The figure cited by the ZEC at the launch of the 2018 PVR was 5,681,604. Thus, there

are 2,332 more registrants in the excel files than the aggregate figure announced by the ZEC - a discrepancy of less than 0.1%. The list of polling stations contains 5,695,379 registrants meaning there are 11,443 more registrants on the list of polling station than on the 2018 FVR a difference of 0.2%.

Accuracy

Missing Data

For each registrant, the 2018 PVR files should contain 14 pieces of information: 1) serial number (unique to the province), 2) surname, 3) forenames, 4) national ID number, 5) gender, 6) date of birth, 7) address, 8) polling station code, 9) polling station name, 10) ward, 11) local authority, 12) constituency, 13) district, and 14) province. The serial number is purely for record keeping and has no intrinsic meaning. The next six (surname, forenames, national ID number, gender, date of birth, and address) serve to identify the registrant while the remaining seven identify where the registrant is assigned to vote. None of this information is missing for any of the 5,683,936 registrants included in the 2018 PVR.

Unclean Data

ID numbers fall into 2 categories - those which are 13 characters long (90.3%) and 14 characters long (9.7%). There are two registrants with ID numbers that are 15 rather than 14 characters long: namely 63-1025317-H45 and 63-1190341-G07. This is due to extra spaces at the end of these IDs. ID 63-1025317-H45 has 101 spaces after the number suggesting a data entry error and the lack of a validation check during data entry or storage.

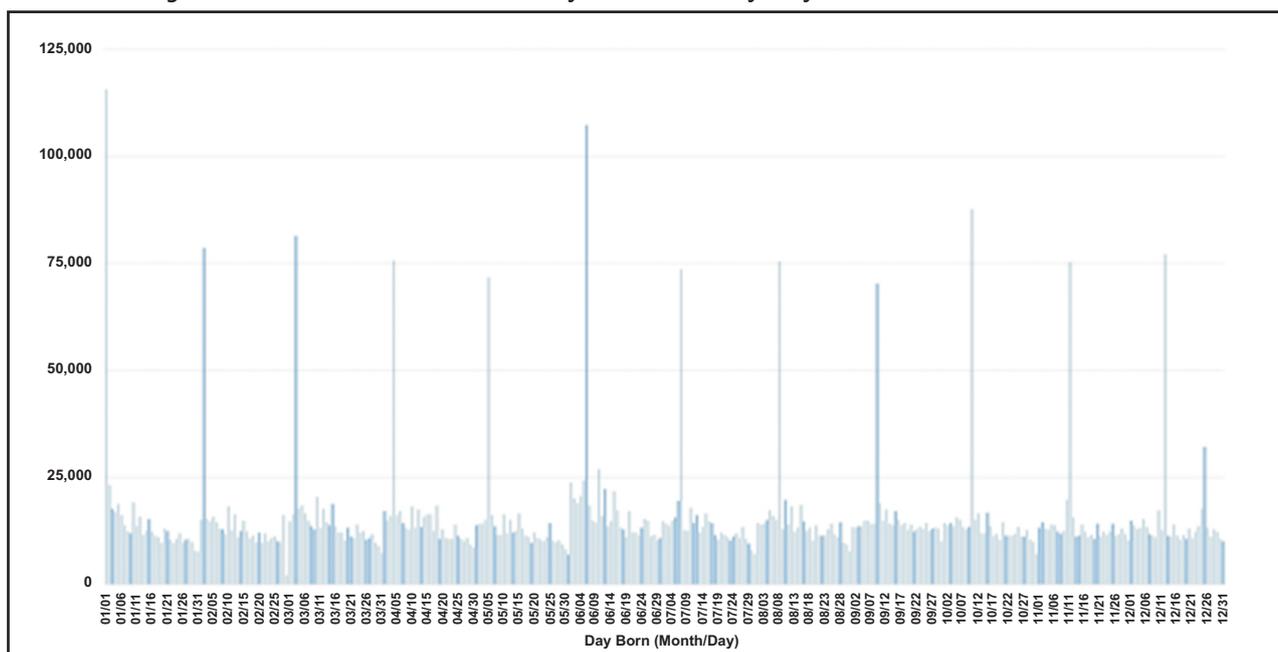

Too Young or Too Old Registrants

There is one registrant on the 2018 PVR who will not be 18 by 30 July 2018 (national ID number 48-173243-V48 with date of birth of 20 September 2000). There are 944 registrants who are 100 years old or older.

Potentially Incorrect Date of Birth

18% (1,021,227) of individuals potentially have the wrong date of birth recorded on their official documents. These registrants were born during 13 days of the year (01 January, 02 February, 03 March, 04, April, 05 May, 06 June, 07 July, 08 August, 09 September, 10 October, 11 November, 12 December and 25 December) (see Chart 2.1). The expected percentage of registrants born on these 13 days is 3.5%. Thus, the actual percentage is more than five times the expected percentage. The number of registrants born on these 13 select days is 7.5% only approximately twice the expected percentage. While this problem with wrong dates of birth is the responsibility of the Office of the Registrar and not the ZEC, it makes it more difficult to identify and remove duplicate records.

Total all Days (366)	5,683,936		5,027,962	

Source: Zimbabwe Election Support Network (ZESN)

Potential Duplicates

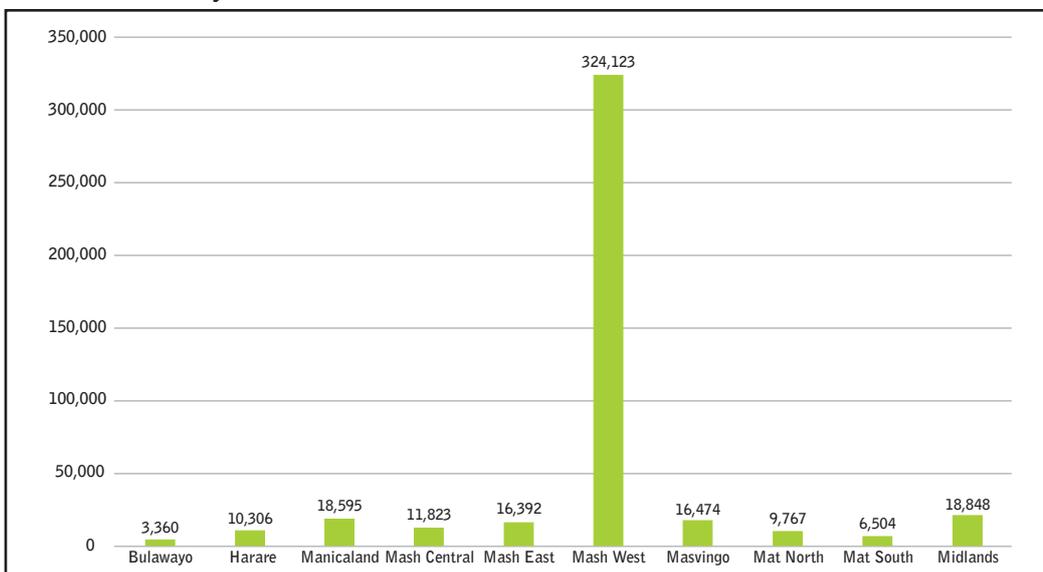

There are 81 (less than 0.01%) records of registrants with the same National ID Card number as other records. There are 4,693 (0.08%) records of registrants with the same surname, forenames, gender, and date of birth as other records.

Mismatching Information

The 2018 PVR was matched against the 2013 PVR to compare identifying information between the two voters' rolls. A total of 3,213,780 (57%) of the 5,683,936 registrants on the 2018 FVR are also on the 2013 PVR.

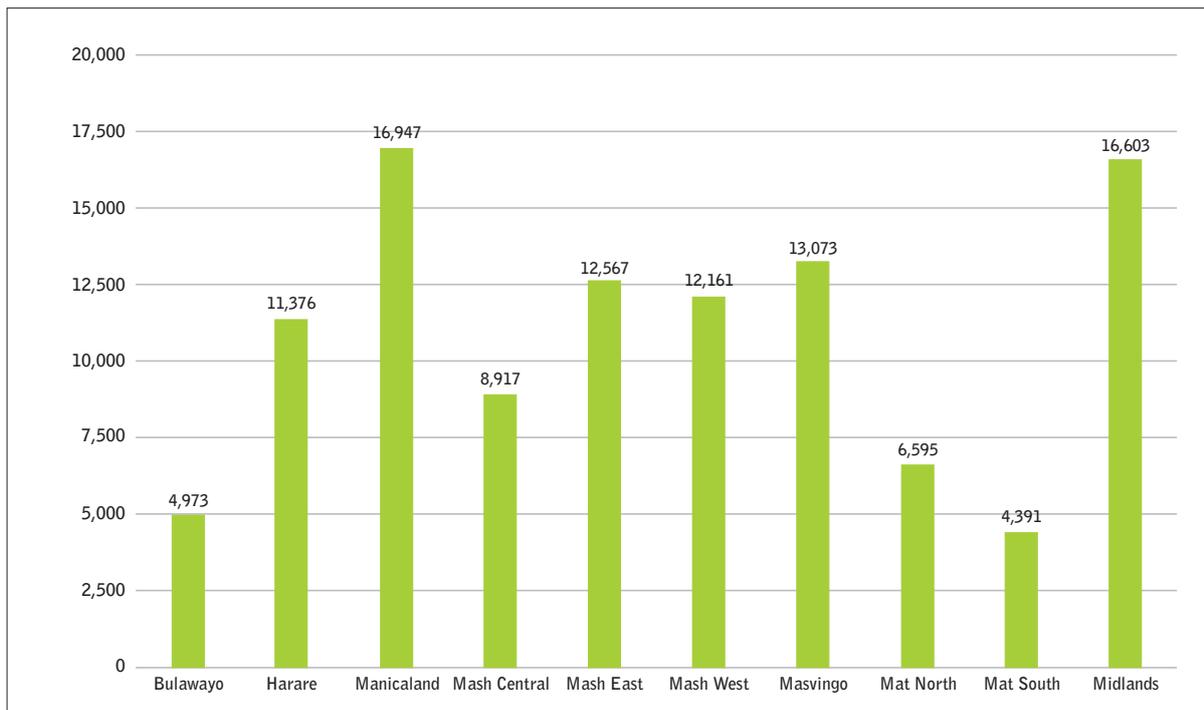

436,192 (14%) of the matched registrants had different dates of birth. However, of these 324,123 (74%) are from Mashonaland West province. Only 112,069 (3%) of the matched registrants from the other nine provinces have different dates of birth. This suggests that the challenge with the date of birth information for Mashonaland West was introduced with the 2018 PVR and did not exist in the 2013 PVR. 107,603 (3%) of matched registrants had different surnames. 29,456 (0.9%) of the matched registrants had different genders.

Currency (Up-To-Dateness)

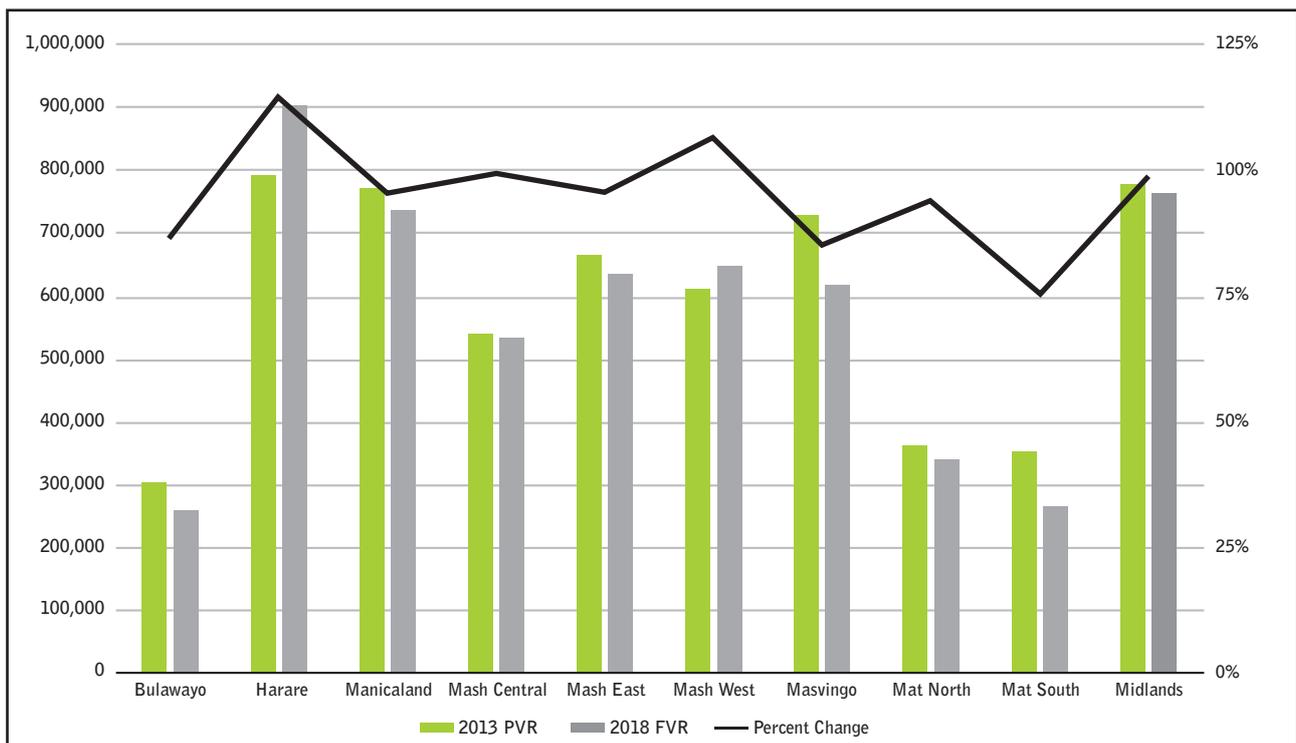

Registrants

While the 2018 FVR's 5,695,706 final figure of registrants had a net increase of 11,770 registrants from the PVR - the reality is that there were 3 types of changes conducted on the Voters Register between the publishing of the 2018 PVR and the 2018 FVR. These were 12,181 additions (0.21% of the PVR) 8,321 amendments (0.15% of the PVR) to the voters' data, 374 removals (0.01% of the PVR). The 2018 PVR has 5,683,936 registrants a

decrease of -205,164 (-3%) from the 5,890,175 registrants on the 2013 PVR. However, of 5,683,855 registrants on the 2018 FVR 2,240,750 (47%) are new registrants and 3,213,780 (53%) were registrants on the 2013 PVR.

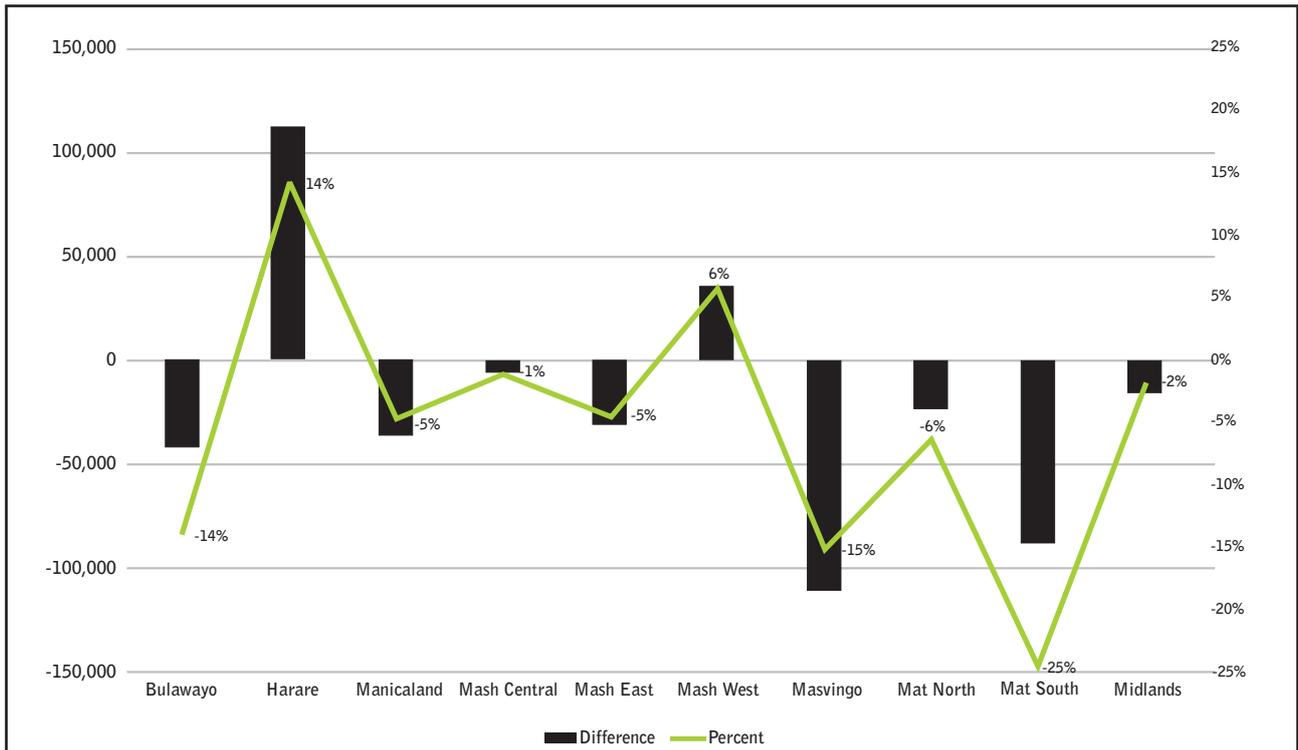

Of the 5,683,936 registrants on the 2018 PVR, 2,471,156 (43%) are new who were not on the 2013 PVR and hence are first time registrants.

Analysis of the Final Voters' Roll

The first level of analysis shows that all fields in the voters' roll (Voter name, ID number, Gender, Date of birth, voter's address, polling station code, PS name up to province) were filed. Generally, the registered voter population of 5,695,706 is lower than both the 18+ 2012 census population (6,805,455) and 2018 18+ projections (7,224,128) (see section on 'Comparison of the FVR with ZimStats Census Data and Projections'). Of the total adult population of registrants contained in the FVR, roughly 54% (3,073,190) are women and 46% (2,622,516) are men.

Table 38: Distribution of Registered voters by province and gender

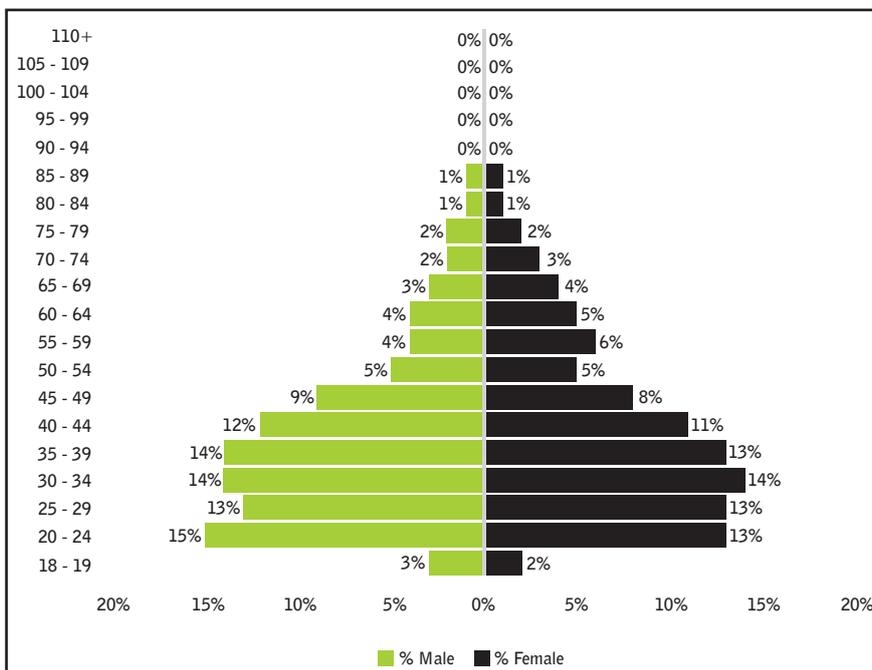

Province	Females	Males	Total
Bulawayo	138,238	120,329	258,567
Harare	457,350	443,370	900,728
Manicaland	415,116	318,254	733,370
Mashonaland Central	279,912	252,072	531,984
Mashonaland East	343,784	289,626	633,410
Mashonaland West	331,564	323,569	655,133
Masvingo	356,533	260,679	617,212
Matabeleland North	190,069	149,066	339,135
Matabeleland South	150,449	113,736	264,185
Midlands	410,175	351,807	761,982
TOTAL	3,073,190	2,622,516	5,695,706

The Table shows that the highest number of registered voters is in Harare (900,728) followed by Midlands (761,982), Manicaland (733,370) and Mash West (65,5133). This pattern generally follows the distribution of the total population in Zimbabwe. These figures also show that more women than men are registered voters across all the country's 10 provinces.

Distribution of Registered Voters by Age

As of the Election Day (30 July 2018), the ages of the registered voters ranged from 18 to 118 years. Roughly 67% (3,201,447) of the population of registered voters was 39 years and below, and was clearly the majority. More than a thousand (1,141) registrants were aged 100 and above. The age group with the highest number of voters was 30-34 years (781,227), followed by 20-24 (780,903) in second place. The others were the 25-29 and 35-39 age groups in that order. In all age groups, more women were registered as voters than men. There are 941 voters who are 100 years and above. The three oldest voters in the final voters' roll were 118 years old and were found in Manicaland, Mashonaland West and Masvingo.

Chart 42: Age Distribution of Registered Voters by gender

The pyramid shows age proportions of registered voters calculated as a percentage of each gender.

Apart from the age variable, ZESN also considered how the registered voters are distributed according to urban / rural locations. The results of the analysis show that most of the registered voters (67%) reside in rural Zimbabwe compared to 33% who stay in urban areas (see table below).

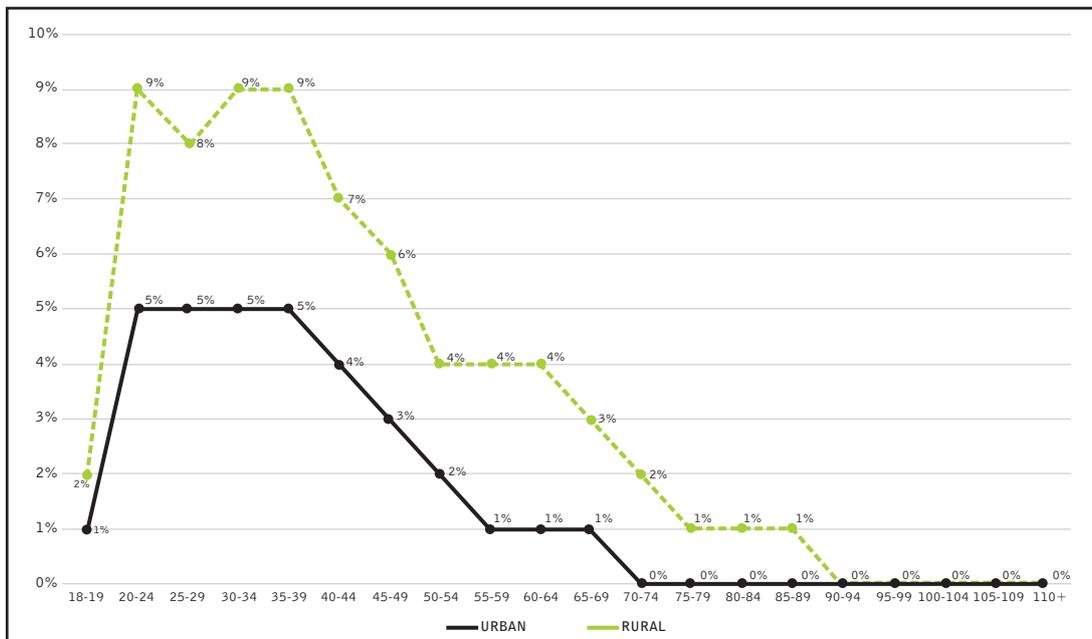

Table 39: Distribution of Registered Voters by urban/rural location

Age Group	Urban	Rural	Total	% total registrants	
				Urban	Rural
18 - 19	44,198	98,403	142,601	0.8%	1.7%
20 - 24	279,054	501,849	780,903	4.9%	8.8%
25 - 29	284,377	446,348	730,725	5.0%	7.8%
30 - 34	295,226	486,001	781,227	5.2%	8.5%
35 - 39	278,755	487,236	765,991	4.9%	8.6%
40 - 44	215,587	415,358	630,945	3.8%	7.3%
45 - 49	165,661	333,076	498,737	2.9%	5.8%
50 - 54	101,836	202,013	303,849	1.8%	3.5%
55 - 59	72,720	212,415	285,135	1.3%	3.7%
60 - 64	59,018	204,408	263,426	1.0%	3.6%
65 - 69	35,269	158,736	194,005	0.6%	2.8%
70 - 74	18,932	113,392	132,324	0.3%	2.0%
75 - 79	10,490	80,154	90,644	0.2%	1.4%
80 - 84	5,182	44,025	49,207	0.1%	0.8%
85 - 89	2,217	29,339	31,556	0.0%	0.5%
90 - 94	544	8368	8,912	0.0%	0.1%
95 - 99	153	4,225	4,378	0.0%	0.1%
100 - 104	22	881	903	0.0%	0.0%
105 - 109	3	166	169	0.0%	0.0%
110+	2	67	69	0.0%	0.0%
Total	1,869,246	3,826,460	5,695,706	32.8%	67.2%

Source: Zimbabwe Election Support Network (ZESN)

When the number of registered voters is viewed by urban/rural location, the analysis shows that the majority of registrants (67.2%) are rural residents while only three in ten (32.8%) stay in urban.

Chart 43: Registrants by age and urban/rural location

Source: Zimbabwe Election Support Network (ZESN)

Across all age groups, the FVR shows that more registered voters come from rural areas than urban. For the younger generations, 39 years and below, this urban-rural difference in proportions of registered voters becomes even bigger.

Multiple Registration Cases in the Final Voters' Roll

The current section highlights unusual or multiple registered entries in the FVR. To identify suspected multiple registered entries, the analysis focused mainly on the voter's national identity number (ID). The reason being that it was expected that the Automated Finger Print Identification System would make it technically impossible to register multiple times using the same ID. It also means that the voter's roll should reject entries which may suggest duplicate registrants. The voters' roll has 45 duplicates by addresses that are highly likely, as they are registrants sharing the same name, address, sex, and date of birth and the ID is almost similar. There are 135 likely duplicates in the 2018 FVR sharing same sex, address, name, and date of birth. Examples of some of the duplicates are outlined below:

Duplicate Entry 1

Surname	Names	ID	Sex	DOB	Address	PS Code	Constituency	Province
Chikwava	Talent	26-186952 C 26	M	24/11/90	Chinyanga Village, Headman Chireya, Chief Chireya	2600GON0406	Gokwe-Chireya	Midlands
Chikwava	Talent	26-186952 C 26	M	24/11/90	Village 9, Tokwe 3 Farming Area, Shurugwi	6600TON1607	Shurugwi North	Midlands

We consider first two entries bearing the name Chikwava Talent. The entries share the same identity number (26-186952 -C26); both are men sharing the same date of birth (24/11/90) and both from the Midlands province. However, they do not share the same address, PS code or Constituency. One stays in Gokwe-Chireya and is registered to vote at a polling station with PS code 2600GON0406, while the other one stays in Shurugwi North and registered at polling station code 6600TON1607. Residential addresses are also different. It is not clear how this happened but it appears to be the same person entered into the voter's roll twice.

Duplicate Entry 2

Surname	Names	ID	Sex	DOB	Address	PS Code	Constituency	Province
Shoko	Miriam	26-209414 S 26	F	14/08/97	Village Chiparanganda, Headman Gumunyu, Chief Chireya	2600GON2201	Gokwe-Gumunyu	Midlands
Shoko	Miriam	26-209414 S 26	F	14/08/97	Village Mutiura, Headman Makore, Chief Chireya	2600GON0306	Gokwe-Kabuyuni	Midlands

Another suspicious case which appears twice is Shoko Miriam. Both names are in Midlands province, but different Constituencies. One is in Gokwe-Gumunyu Constituency under PS code 2600GON2201 while the other is in Gokwe-Kabuyuni, PS code 2600GON0306. Though the two are under Chief Chireya, they reside at different residential address and under different headmen. What is really disturbing is that they share the same date of birth (14/08/1997); both are women and most importantly share the same ID (26-209414 - S26). The ID is supposed to be unique to the individual. Again, this appears to be the same person.

Duplicate Entry 3

Surname	Names	ID	Sex	DOB	Address	PS Code	Constituency	Province
Makamure	Rosario	38-123629 B 38	F	24/10/78	House Number C022, Unnamed Street, Epworth, Harare	6301EPW040 1C	Epworth	Harare Metropolitan
Kondo	Chalton	38-123629 B 38	M	28/06/74	Village Sungwi 1b, Headman Mazaula, Chief Mujinga	3800HUR0201	Hurungwe East	Mashonaland West

How is it possible that two different people of different genders share the same ID? This is the case of Makamure Rosario and Kondo Chalton; both with ID number 38-123629 -B38. Makamure Rosario was born on 24 October 1978 and lives at House number C022, unnamed Street in Epworth in Harare. Kondo Chalton is from Mashonaland West, born on 28 June 1974 and living in Village Sungwi 1B under headman Mazaula and Chief Mujinga. The two are registered at two different polling stations as shown by the unique PS codes, in different constituencies namely Epworth and Hurungwe East. As already noted, the case of this pair might simply have been the result of a data entry error.

Duplicate Entry 4

Surname	Names	ID	Sex	DOB	Address	PS Code	Constituency	Province
Chingandu	Tanyanyiwa Moses	63-493581 L 25	M	12/01/40	House Number 3271, Nhunguru Street, Zengeza, Chitungwiza	6301CHIT1001	Zengeza West	Harare Metropolitan
Chingandu	Tanyanyiwa Moses	63-493581 L 25	M	12/01/40	House Number 21, Nhunguru Street, Zengeza 2, Chitungwiza	6301CHIT1002	Zengeza West	Harare Metropolitan

The registrant Chingandu Tanyanyiwa Moses also appears twice in the final voters' roll. Both entries share the same ID number (63-493581-L25), which is supposed to be unique to the individual. Both are males staying in Nhunguru Street, Zengeza in Chitungwiza. However, their house numbers differ. Though they are both registered under the same Constituency, they are registered to vote under different polling station.

Duplicate Entry 5

Surname	Names	ID	Sex	DOB	Address	PS Code	Constituency	Province
Ndlovu	Tendai	67-076653 E 67	F	30/08/71	House Number 579, Mandava	6701ZTC0102	Zvishavane Ngezi	Midlands
Ndlovu	Tendai	67-076653 E 67	F	30/08/71	Mudereri Village, Headman Mudereri, Chief Masunda, Zvishavane	6700RDC1304	Zvishavane Runde	Midlands

Ndlovu Tendai also appears twice in the FVR. Both registrants are from Midlands, share the same ID, which, as already noted, should not be possible as the ID is unique to individual, same sex and date of birth. However, the two do not share the same residential address; one lives in Mandava whereas the other lives in Masunda (Zvishavane). In addition, they are also registered in different constituencies though both constituencies are in Zvishavane in the Midlands province, but are registered to vote at different polling station.

The analysis also points to suspicious cases with different permutations; 65,536 voters with duplicate names, 4,862 voters with duplicate names and date of births, 7,416 voters with duplicate names and address, 44 voters with the same name date of birth and similar address. The list can be found in the excel file called duplicates. Below, we present two unusual cases where we think chance alone can explain the similarities.

Table 40: Unusual cases

Surname Forenames	ID Number	Gender	Date of Birth	Voter Address	Polling Station Code	Constituency	District	Province
Ndlovu Eunice	28-020069 W 28	F	9/4/1963	Bethel Village, Headman Dubane, Chief Nhlamba, Gwanda	2800GWA1401	Gwanda	Gwanda Central	Matabeleland South
Ndlovu Eunice	08-449203 Q 28	F	9/4/1963	Bethel Village, Headman Dubane, Chief Nhlamba, Gwanda	2800GWA1401	Gwanda	Gwanda Central	Matabeleland South

Ndlovu Eunice has two entries that have different IDs, same gender, voter's address, same polling station and Constituencies. What is most striking about these two entries is that they also share the same date of birth.

Comparison of the FVR with Zimstats Census Data

In this section, the FVR is compared to both official (ZimStats) 2018 census projections and the 2012 census figures. Generally, the FVR population of registrants is lower than projected census data with more than 1.5million eligible voters translating to 21%. The table below is a comparison of the eligible versus actual registered voters.

Table 41: Eligible versus Actual registered voters- A summary

Gender	FVR	Projected Census (2018)	Difference	% Difference
Men	2,622,516	3,349,462	-726,946	-21.70
Women	3,073,190	3,874,665	-801,475	-20.69
Total	5,695,706	7,224,128	-1,528,421	-21.16

The Table above indicates that a smaller number of people registered to vote when compared to the ZimStats' 2018 adult population projections. Overall, 21% of the projected population did not register to vote.

Further analysis shows that there many cases across provinces, rural/urban location, districts and constituencies where the FVR populations are higher than both census and projected populations. These are listed below:

- In Bulawayo FVR population figures are more than the 2012 census and 2018 projections for the age group 60+ years.
- For Harare urban VR population is lower in most ages except 45-49 age category
- Data for Manicaland urban show that FVR figures are more than census data for ages range; 45-49
- For Manicaland Rural, FVR data greater than both census figures for 35-39, 40-44, 45-49, 55-59, 60-64 and 65-69.
- In Mashonaland Central Urban FVR population is lower than the census figures across all age groups
- For Mashonaland Central Rural FVR population is noticeably higher than census data in ages 35-49 40-44, 45-49 and 65-69
- Mashonaland East urban, FVR population is generally lower than census figures across all age groups
- Mashonaland East Rural, ages 35-49 and 55-69

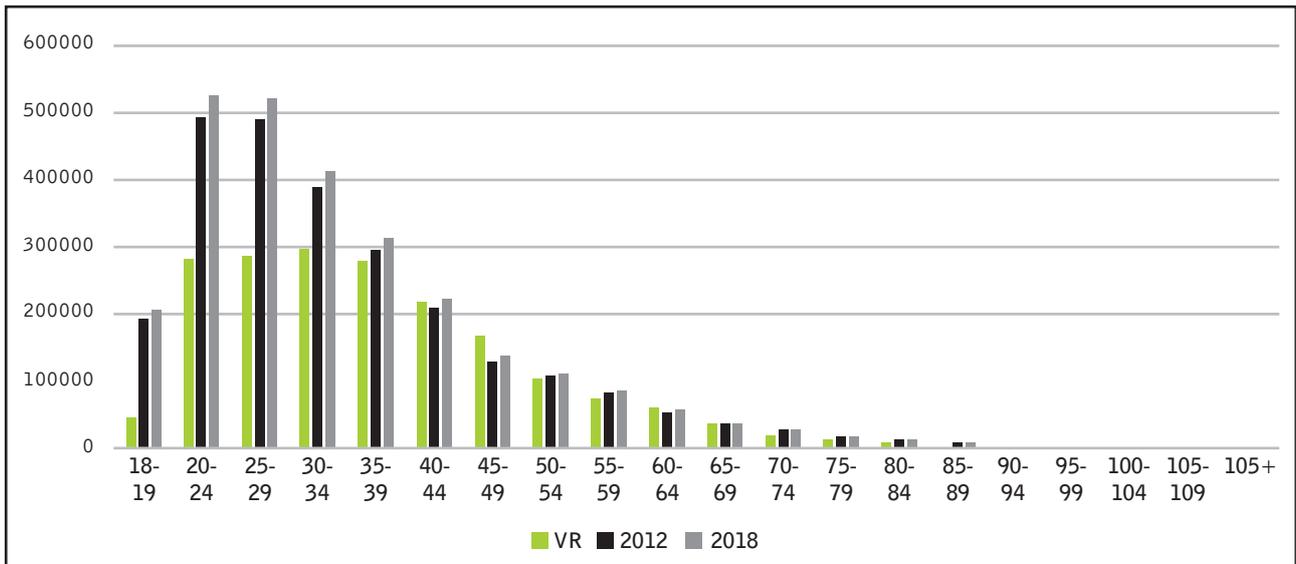

have higher FVR population compared to census data.

- Mashonaland West Urban, FVR population higher in ages 45-49years and slightly 60-64.
- In Mashonaland West Rural, FVR figures are higher census projections in the 35-49 years categories.
- Masvingo Urban, FVR lower than census for most age groups except for 45-49.
- Masvingo Rural, for age categories 40-49years and 60-74years, both 2012 census figures and 2018 projections are lower than FVR population.
- Matabeleland North urban, FVR population is higher than census data in the 30-64years age categories.
- Matabeleland North Rural, in ages 35-49, 55-69 FVR population is higher than census figures.
- FVR population for Matabeleland South urban is higher than census data in ages 40-49.
- Matabeleland South FVR population is higher than census population in categories45-49 and 60-64years.
- In Midlands urban FVR population is higher than census data in ages 35-39 and 40-49years
- FVR population for Midlands Rural is higher than census in ages 35-49 then 55-79years only.

It is noteworthy that there are significantly few instances where the FVR records higher than census data registration for Zimbabweans aged 39 and below. As already observed; 56% of registered voters fall under this blanket age group (20-24; 25-29; 30-34; 35-39). This may explain why the usually higher than census data across provinces has no significant effect on the overall picture which shows that registrants are less than both the baseline census and projected figures.

Below, we highlight the disaggregation of the total registered population by urban/rural location and then by whole population. In the process, we compare FVR data with both the census figures and projected population of Zimbabweans aged 18 and above. The figure below compares population of registrants in urban Zimbabwe against urban populations as at both the baseline census figures and 2018 projections.

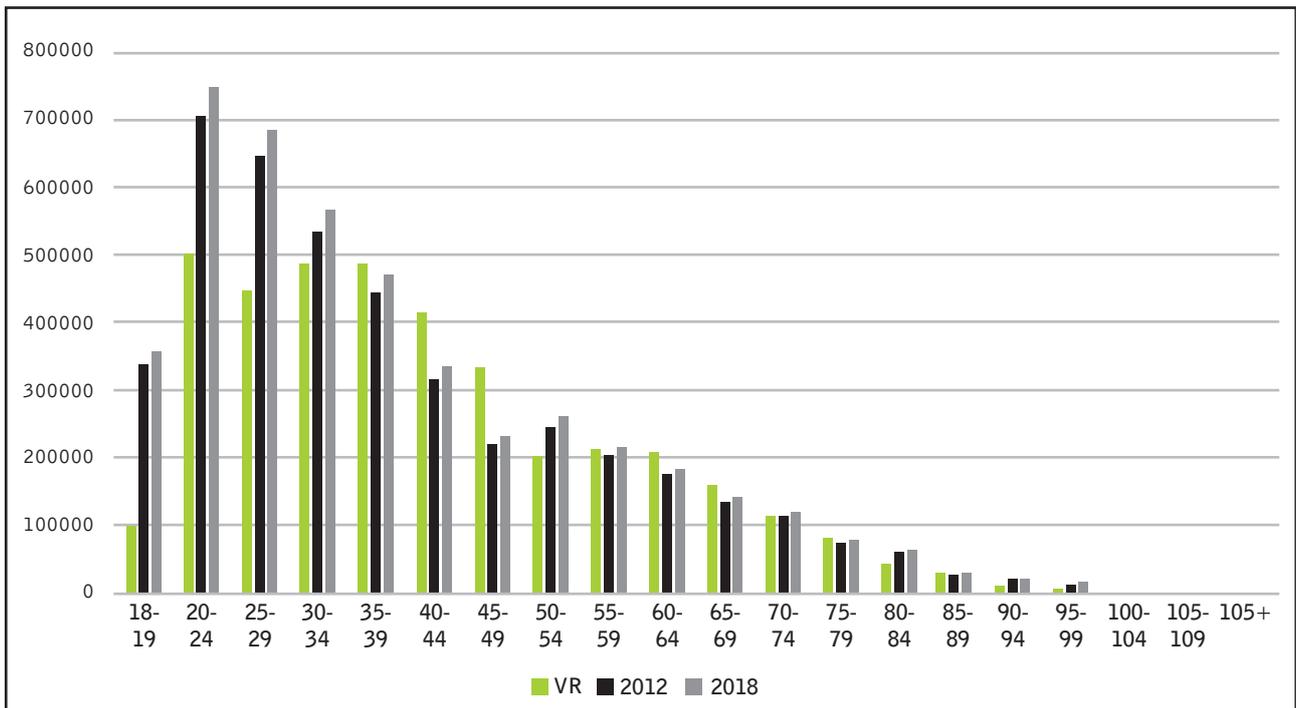

Chart 44: Urban Registrants against census populations

Source: Zimbabwe Election Support Network (ZESN)

When ZESN examines the population of urban registrants, it finds out that the FVR Urban population is generally lower than census data except for adult Zimbabweans aged 45-49 years. The results seem to suggest that young adults, especially those below 39 years old and living in urban areas, have been under-registered compared to the older generations.

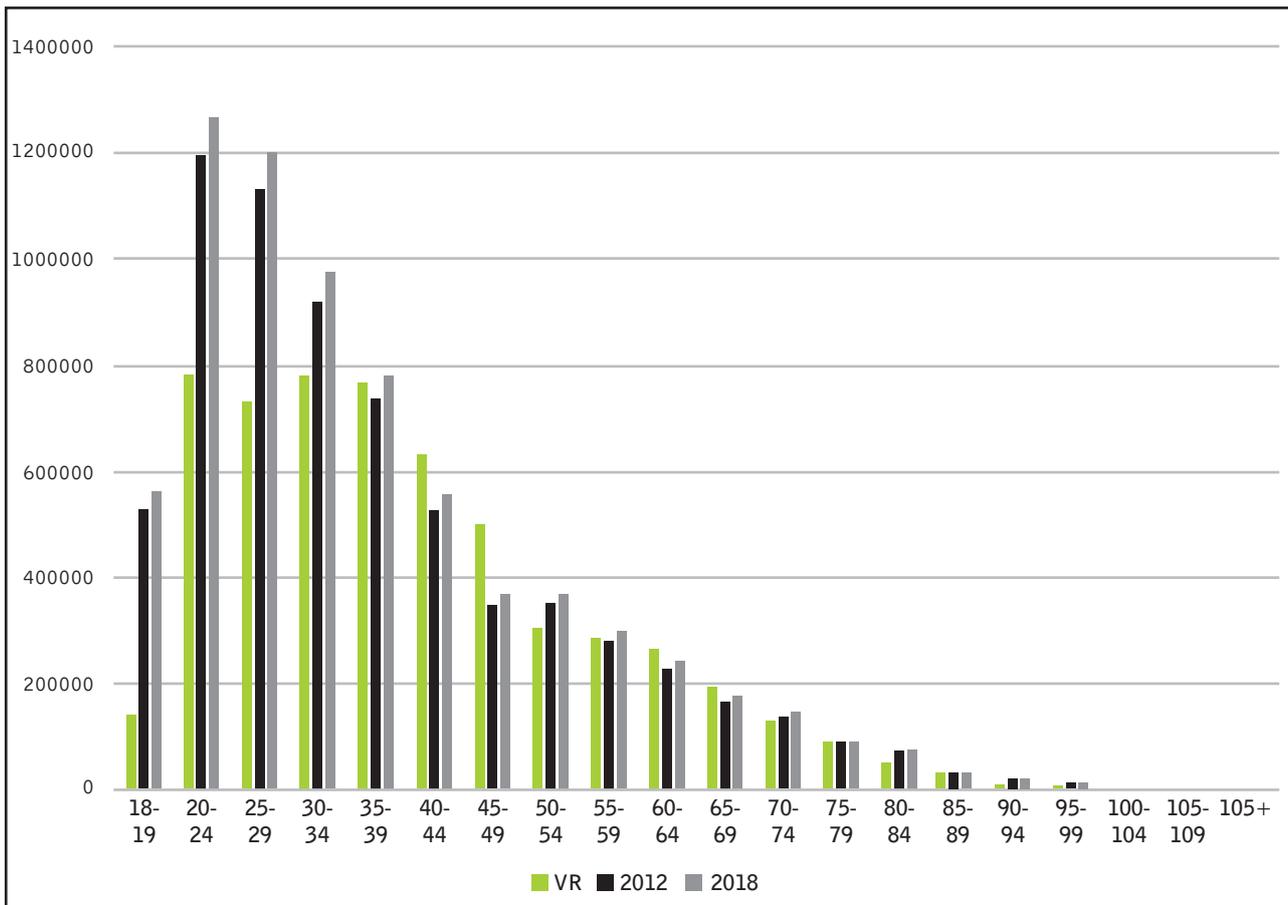

Chart 45: Rural Registrants against census populations

Source: Zimbabwe Election Support Network (ZESN)

In Rural Zimbabwe, FVR population is higher than census data in the 35-49 years and 60-69 years age category.

Chart 46: Zimbabwe population comparison

Source: Zimbabwe Election Support Network (ZESN)

The overall picture presented in the figure is that the FVR population of registrants is lower than both the baseline census data and the 2018 projections of the adult population. However, we also note that FVR population is higher than census data in ages 40-49 years then 60-69 years. This difference, however, is not large enough to have any impact on the overall picture.

This report could not however, compare constituency data with Census figure as ZimStats data does not consider constituencies during census. To be able to do this, there is need first compile data by ward then aggregate wards that are in each constituency manually. This task is beyond the scope of this report.

Comparison of the FVR with Preliminary Voters Roll (PVR)

This section makes an analysis of the 2018 PVR and the 2018 FVR. The Table below is a comparison of the provincial totals for both the preliminary voter's roll and the final voters' roll as published by ZEC. Overall, the registered voters increased marginally (0.21%) from 5 683 936 in the PVR to 5 695 706 in the FVR. However, when ZESN checks how this marginal increase plays out across by province, it realizes that about 86.3% (10159 out of total of 11770) of those that were added to the final register are in Mashonaland West province.

Table 42: Distribution of voters by province (preliminary versus final)

Province	Preliminary voters roll		Final Voters roll		Difference	
	Number of voters	% of Voters	Number of voters	% of Voters	Number of voters	% increase
Bulawayo	258,690	4.55	258,567	4.54	-123	-0.05
Harare	900,300	15.84	900,728	15.81	428	0.05
Manicaland	733,293	12.90	733,370	12.88	77	0.01
Mashonaland Central	531,864	9.36	531,984	9.34	120	0.02
Mashonaland East	633,126	11.14	633,410	11.12	284	0.04
Mashonaland West	644,974	11.35	655,133	11.50	10159	1.58
Masvingo	617,204	10.86	617,212	10.84	8	0.00
Matebeleland North	338,851	5.96	339,135	5.95	284	0.08
Midlands	761,474	13.40	761,982	13.38	508	0.07
Matebeleland South	264,160	4.65	264,185	4.64	25	0.01

The analysis also shows that 123 (-0.05%) voters were removed from Bulawayo province. Marginal increases are observed across all other provinces with the least positive variance in Masvingo where there was an increase of only 8 (0.001%) registrants. The marginal variances recorded between the FVR and the PVR of less 5% margin of error implies FVR quality was nearly the same as the PVR released on the 18th of June 2018.

Table 43: Distribution of Voters by Province (Final versus Preliminary)

	Final Voters Roll					Preliminary Voters Roll						
	Males	Males (%)	Females	Females (%)	Total	Total (%)	Males	Males (%)	Females	Females (%)	Total	Total (%)
Bulawayo	120329	46.54%	138238	53.46%	258567	4.54	120387	46.54%	138303	53.46%	258690	4.55
Harare	443378	49.22%	457350	50.78%	900728	15.81	443178	49.23%	457122	50.77%	900300	15.84
Manicaland	318254	43.40%	415116	56.60%	733370	12.88	318219	43.40%	415074	56.60%	733293	12.90
Mashonaland central	252072	47.38%	279912	52.62%	531984	9.34	252021	47.38%	279843	52.62%	531864	9.36
Mashonaland East	289626	45.72%	343784	54.28%	633410	11.12	289475	45.72%	343651	54.28%	633126	11.14
Mashonaland West	323569	49.39%	331564	50.61%	655133	11.50	318184	49.33%	326790	50.67%	644974	11.35
Masvingo	260679	42.23%	356533	57.77%	617212	10.84	260692	42.24%	356512	57.76%	617204	10.86
Matebeleland North	149066	43.95%	190069	56.05%	339135	5.95	148948	43.96%	189903	56.04%	338851	5.96
Midlands	351807	46.17%	410175	53.83%	761982	13.38	351586	46.17%	409888	53.83%	761474	13.40
Matebeleland South	113736	43.05%	150449	56.95%	264185	4.64	113734	43.05%	150426	56.95%	264160	4.65
Total	2622516	46.04%	3073190	53.96%	5695706	100.00	2616424	46.03	3067512	53.97%	5683936	100

Across all the 10 provinces in the country and for both the FVR and the PVR, more women than men registered to vote. The final voters' roll for Bulawayo shows that 65 women and 58 men have been scrapped of the FVR. Combined, this give a total of 123 as earlier observed. Masvingo Province results show an increase in the number of females in the final voter's role from 356,512 to 356,533 while the males show a decrease from 260,692 to 260,679 registrants.

List-to-people

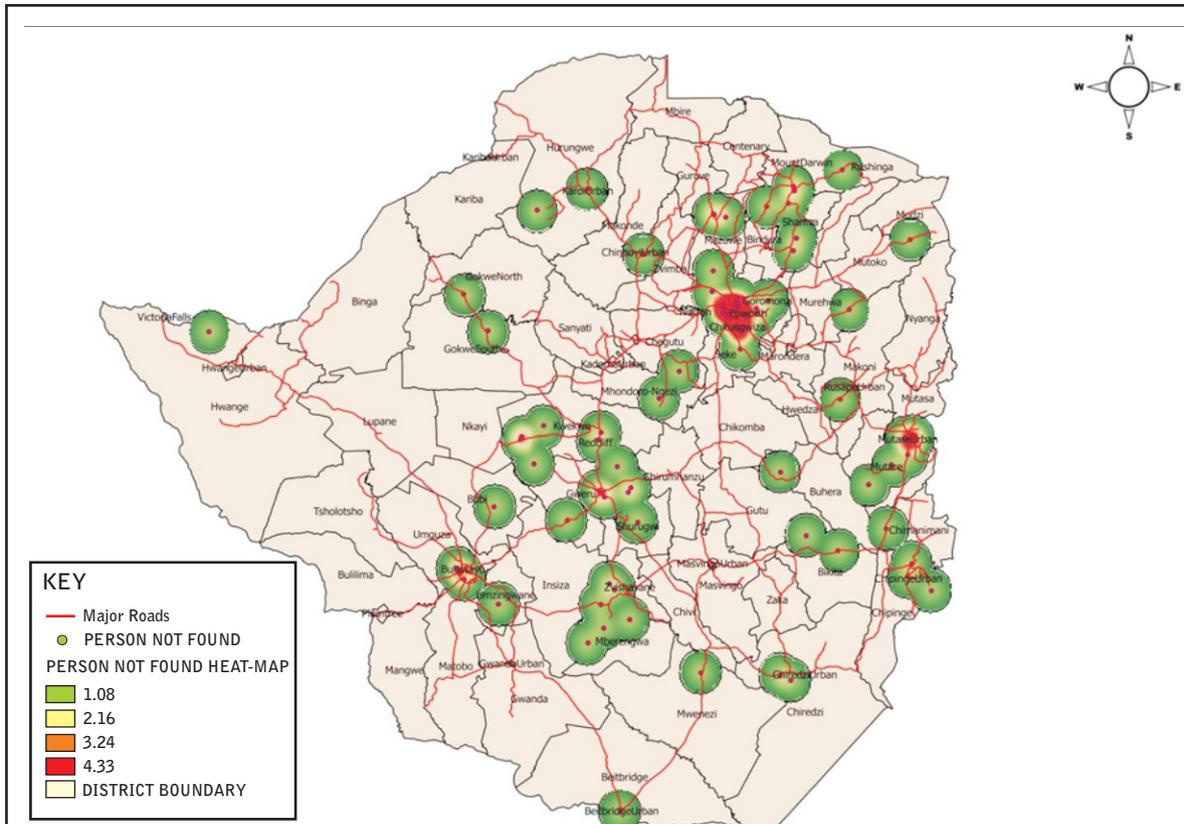

Currency

Through the list-to-people test ZESN managed to reach, 89% of respondents. 3% of the respondents were said to have moved out from the given address in the voters' roll. 8.3% were not known at given address.

The 4th Schedule of the Constitution of Zimbabwe provides that the Electoral law may prescribe additional residential requirements to ensure that voters are registered on the most appropriate voters' roll, however these must be consistent with the Constitution, particularly Section 67. Whilst prescribed in the law, proof of residence was difficult to obtain and more so for those residing in the urban areas. As a means to relax the stringent requirements for providing proof of residence, the ZEC introduced Form VR.9 Affidavit of Residence Voter Registration for those whom it was difficult to obtain requisite proof of residence. During the

biometric voter registration a person without proof of residence who wanted to register could approach ZEC officials and fill in the VR.9 form confirming their place of residence. Challenges experienced with the affidavit form included that Commissioner of oaths were not adequately deployed to cater for those using the affidavit at the initial stages of registration. In some cases registrants were provided with pre-signed affidavits⁸. Hence the ZEC could not easily ascertain whether indeed a claimant for registration was resident at that address. During inspection the ZEC, could have posted the voters' roll outside Inspection Centres and citizens could have made objections.

The map below illustrates the areas where person was unknown at the given address. Harare has the highest number of those who were not known at the given address. Other provinces with seemingly high numbers are Midlands, Manicaland, and Mashonaland Central.

Map illustrating those who were unknown at the given address

⁸The Herald; ZEC fumes over pre-signed affidavits; 31 October 2017, available at <https://www.herald.co.zw/zec-fumes-over-pre-signed-affidavits/>

Table 44

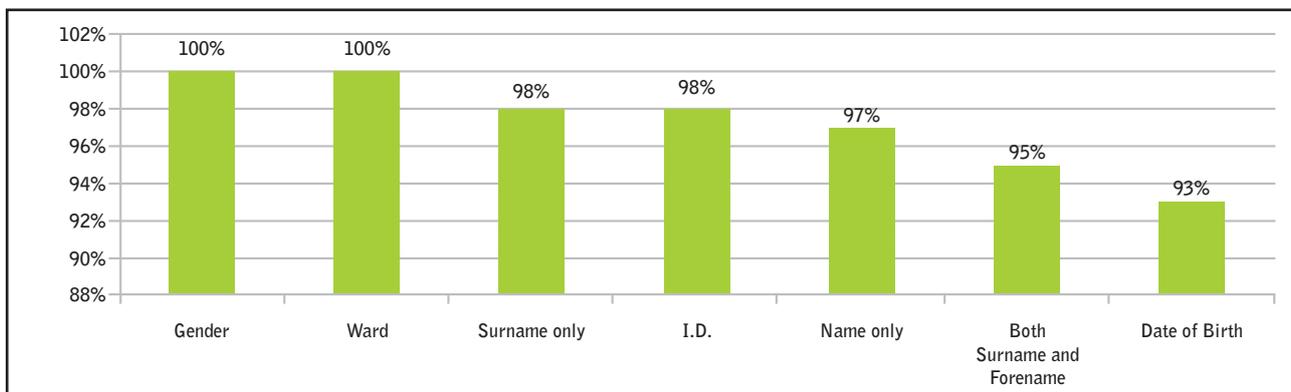

PROVINCES	GENDER		
	FEMALE	MALE	Grand Total
Bulawayo	2	2	4
Harare	12	13	25
Manicaland	9	6	15
Mashonaland West	1	1	2
Mashonaland Central	8	3	11
Mashonaland East	2	4	6
Mashonaland West	3	2	5
Masvingo	4	1	5
Matabeleland North		2	2
Matabeleland South	1	1	2
Midlands	14	9	23
Grand Total	56	44	100
Total Percentage	4.67%	3.67%	8.33%

Accuracy List-to-people

To measure accuracy, ZESN matched gender, ward, surname, National IDs, forenames and date of birth. The ZEC endeavored to capture voter registration data with a high degree of accuracy. Of the 1,063 individuals sampled from the 2018 Voters Roll who were located, their surname, forenames, surname and forenames together, their gender, their National ID number, their date of birth, and their assigned

ward from the 2018 Voters' Roll were compared against the information that they provided to the ZESN enumerators. For each type of these seven types of identifying data, the information on the 2018 Voters Roll matched that provided by the individual in over 95% of the cases. The highest percentages were for gender and ward which matched for 100% of the individuals and the lowest was for date of birth which matched for 91.8%.

Chart 47: Accuracy

Identification Number Mismatch

A verification exercise of the list-to-people method to confirm accuracy of national identification numbers showed that mismatches were 2.2%, major mismatches were 0.2% and minor mismatches 2%. These statistics do not include respondents who refused to show enumerators their IDs, and another 9% could not be located at the given address.

ID number Mismatches

All mismatches	Major mismatches	Minor mismatches
2.2%	0.2%	2%

Typical example of major mismatch

23-115883-J23	26-124456-X23
---------------	---------------

⁹ZEC data is colour coded in green and written in capital letter

Name Spelling

Matching both surnames and forenames from the voters' roll with registrants data collected from the field revealed that the total spelling error rate was 4.9%, minor mismatches 4.3% and major mismatches 0.6%.

Names Mismatch (Both Surname and Forename)

Surname and Forename Mismatch

Total mismatches	Minor mismatches	Major mismatches
4.9%	4.3%	0.6%

Surname mismatch

A comparison surnames using list-to-people, reveals total mismatches of 1.8%, minor mismatches of 1.4% and major mismatches of 0.3%, as indicated in the Table below. It might be possible that the minor errors are because of human error. The 2 cases highlighted below show different surnames, but the forenames, ID and date of birth are the same. Whilst minor mismatch might be immaterial but a major mismatch could prevent registrants with such cases from casting their vote. ZEC should determine what constitutes an immaterial and material mismatch that will prevent a voter from casting a vote.

Surname mismatch

Total mismatches	Minor mismatches	Major mismatches
1.8%	1.4%	0.3

Minor matches are minor spelling differences e.g.

SANGANI	Sanganai
KASANAYI	Kasanhayi

2 cases have different surnames but same forenames.

MAPONDERA	Makova	Gertrude	GERTUDE
CHIPARAUSHE	Samabonde	Akimu	AKIMU

FORENAMES MISMATCH

Analysis of the forename reveals that all mismatches are 3.3%, minor mismatches whilst 0.3% constitutes major mismatches, were the forename of the registrant is different from what is given in the voters' roll, but yet date of birth, ID and address are the same. Examples of minor mismatches from the list-to-people test are as shown in Table below and these in most cases show differences of a letter in capturing data.

¹⁰Data from the voters' roll is in capital letters

¹¹Data from the ZEC is in capital letters

Table 49: Forenames Mismatch

Total mismatches	Minor mismatches	Major mismatches
3.3%	3%	0.3%

Example of minor mismatches:

Forenames minor mismatch

q13.1	Forenames
Wellington	WELLINGTON W
Magret Loveness	MARGARET LOVENESS
Emry	EMERY
Chipo Foncinia	CHIPO FONCINA
Anymore Joe	AMYMORE JOE
Winnet	Winnie
Maudi	MAUD
Tracey	TRACY
Phillip	PHILLIP

Accuracy: Date of Birth

In the voters' roll the format for date of birth is recorded as follows month/ day/ year. Comparison of date of birth details collected by enumerators and those from the voters' roll, show 7% total mismatches. 2.6% are level 1 mismatches (mixed day and month), 3.1% are level 2 mismatches (one element mismatch day, month and year), and 1.3% are level 3 mismatches (2 elements or more mismatched). See table below:

Date of Birth Mismatch

Total mismatches	Level 1 mismatch (Mixed day and month)	Level 2 mismatch (one element mismatch either day, month or year)	Level 3 mismatch (2 elements or more mismatch)
7.0%	2.6%	3.1%	1.3%

Level 3 mismatches are of concern because there is little possibility of our enumerators making an error on more than 1 date element.

Examples of date of birth mismatch

E.g. level 3 mismatches		Typical Level 2 mismatches	
Date of	q15	Date of	q15
05-02-99	21-05-99	08-03-99	07-03-99
11-08-84	27-06-16	14-05-76	14-10-76
16-03-97	03-10-97	14-06-53	14-08-53
10-01-71	05-12-71	09-11-84	11-11-84
28-12-91	02-02-77	14-04-76	04-04-76
03-05-82	25-09-02	16-03-58	16-03-56
10-02-90	01-03-13	12-03-87	12-03-83
17-07-67	28-04-67	11-12-82	12-12-81

Typical Level 1 mismatches	
Date of	q15
11-01-78	01-11-78
03-07-83	07-03-83
12-07-86	07-12-86
02-10-85	10-02-85
11-12-68	12-11-68
10-06-80	06-10-80
06-02-81	02-06-81
05-01-00	01-05-00

Assessing comprehensiveness of the voters' roll

People-to-list

Missing Names

Records of registered voters' collected by enumerators from the field were then verified in the voters' roll in order to find out if there are any missing names. Of those who said they are registered voters' upon verification, 11.8% could not be located in the register. Provincially Harare (22.2%) has the highest number of missing records (See Table below). These people who could not be found might not be registered because they did not provide relevant proof of registration in the form of a slip though during field work they said they were registered.

Table 45: Missing Names

Province	Verified	Not Found	Grand Total	Percent
Bulawayo	48	11	59	18.6
Harare	133	38	171	22.2
Manicaland	119	23	142	16.2
Mashonaland Central	126	3	129	2.3
Mashonaland East	108	13	121	10.7
Mashonaland West	118	17	135	12.6
Masvingo	124	18	142	12.7
Matabeleland North	57	1	58	1.7
Matabeleland South	75	3	78	3.8
Midlands	135	12	147	8.2
Grand Total	1,043	139	1,182	11.8

Missing data age

It can be noted that more respondents in the 15-34 age group (15.7%) and 75 – 95 age group (14%) could be potentially missing from the voters' roll. But since they did not provide any proof of registration it is difficult to ascertain that they are registered.

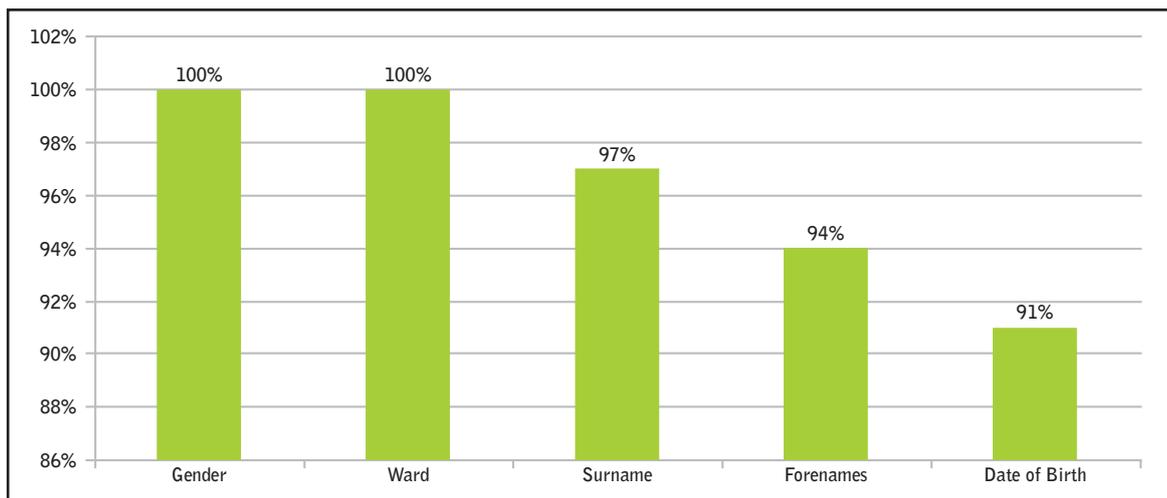

Table 46: Missing data age

Age	Verified	Not found	Grand Total	Percent
15-34	377	70	447	15.7
35-54	409	45	454	9.9
55-74	220	18	238	7.6
75-95	37	6	43	14.0
Grand Total	1,043	139	1,182	11.76

Accuracy

To evaluate accuracy - the gender, ward, surname, forename and date of birth of persons of who claimed to have registered to vote were matched with the records from the voters' roll. Accuracy for variables assessed is above 91%, were accuracy for gender and ward is 100%, accuracy for surname is 97%, accuracy for forename is 94% and date of birth is 91%.

Chart 48: Accuracy people to list

Date of birth

All date of birth mismatches are 9.2%.

Subdivided by levels of mismatch

Level 1- day and month mixed-up day but similar year	Level 2- at least one DOB element is different	Level 3 at least 2 DOB elements are different
0.5%	6.4%	2.3%

Of concern are level 3 mismatches were 2 or more elements of the date of birth are mismatched.

Surnames Mismatch

Major mismatches 0.3% were the surname mismatches recorded by the field enumerators is totally different from the one given in the voters' roll.

Surnames mismatch

MUCHONO	WILLIAM
MEYA	NDAIZIVEI
MATASHU	TSHUMA

Minor surname mismatch

MAGODI	MAGODE
MAVERA	MAVHERA
NHANHANGA	NANGANGA
MAGUMBATE	MUGUMBATE
RUVUDZI	RUVHUDZI
MOYO	MOYO T
NYUNI	NYONI
TSUNGU	TSOMBO

All mismatches surname

All	Major	Minor
3%	0.3%	2.7%

Forename Mismatch

Major mismatches are 0.3% of the sampled individuals.

JOSHUA	WILLIAM
KEPHAS	ZERIPAH
MARY	NDAIZIVEI

Minor mismatches are 5.8%

WASHINGTON	WASHINGTONE
BENARD	BERNARD
MUCHARUVANZA	MUCHARUVUNZA
KESEGII	KESEGI
ARON	AARON
OMEGA	OMEGAH

All forename mismatches

All	Major	Minor
6.0%	0.3%	5.8%

Perceptions on Voter Registration

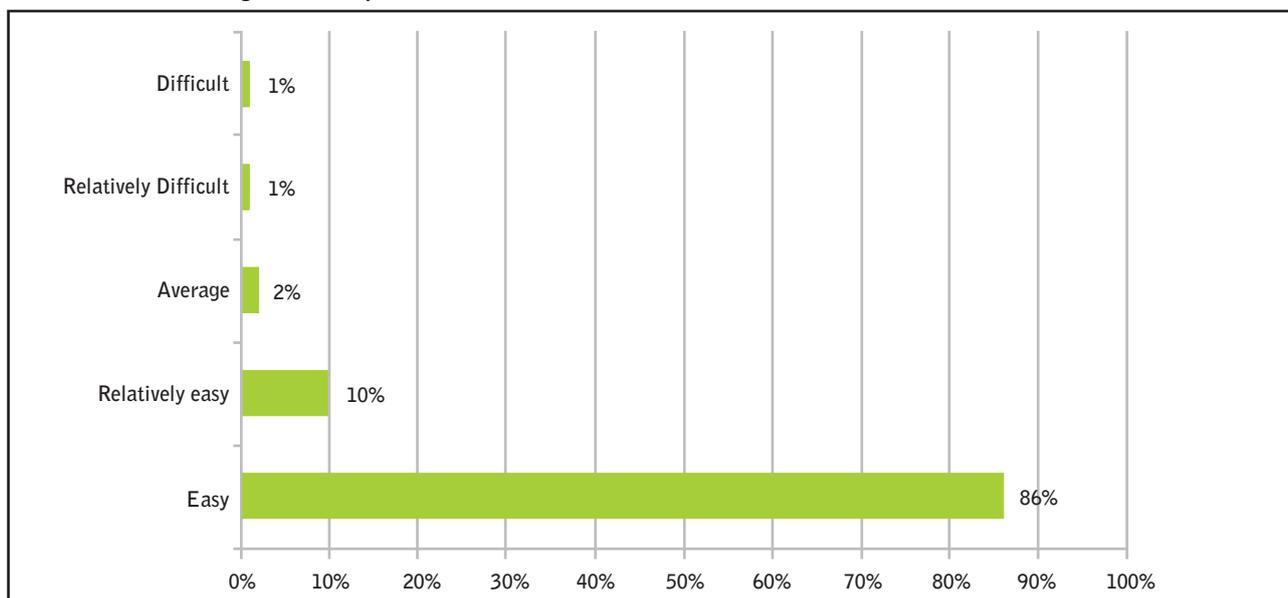

Voter registration establishes eligibility of individuals to vote. Through voter registration citizens are able to exercise the right to vote. According to the Constitution of Zimbabwe Section 155 (2) (a), the State must take all appropriate measures, including legislative measures, to ensure that all eligible citizens, are registered as voters.

reports have shown that proof of residence; long distances to registration centres, intimidation of registrants, among others were recurrent challenges with voter registration in the past. During BVR, the ZEC put measures in place that relaxed requirements for proof of residence, citizens were also able to register from any part of the country provided they had supporting documentation for registration¹². A survey conducted by the Afrobarometer, in June 2018 further indicates that majorities were satisfied by the BVR process¹³.

Perceptions on Voter Registration process

Most (98%) viewed the voter registration process as easy/ relatively easy/ average. ZESN previous

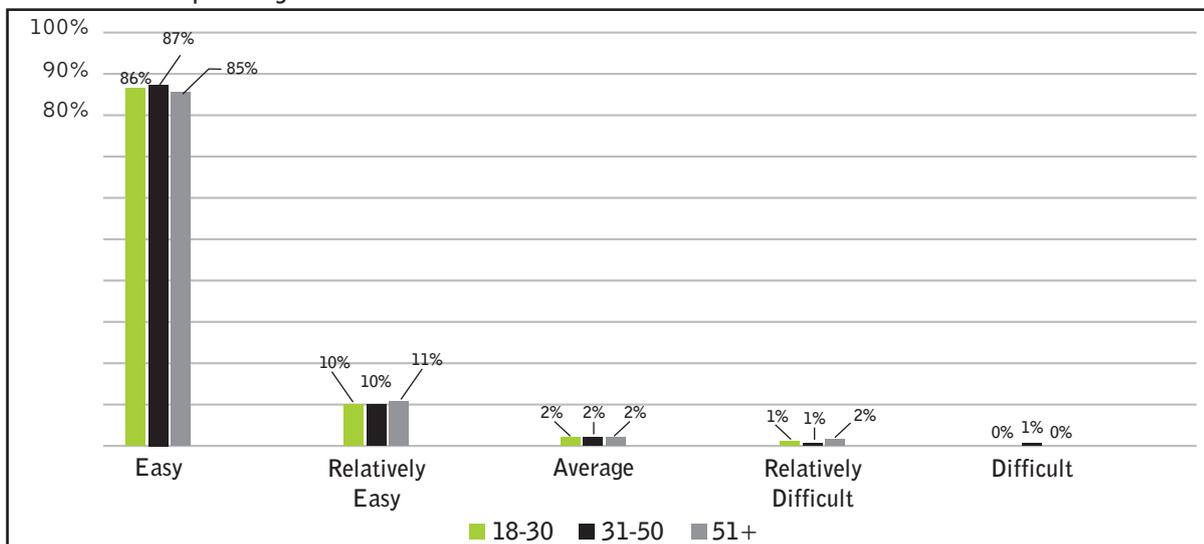

Chart 49: Voter Registration process

Perception by Age

Perceptions of the voter registration process by age are mostly positive as, majorities from all age categories found the registration process easy/ relatively easy.

Chart 50: Perception Age

¹²Newsday: ZEC relaxes voter registration requirements: available at <https://www.newsday.co.zw/2017/07/zec-relaxes-voter-registration-requirements/> 21 July 2017

¹³Afrobarometer, MPOI and IJR: News Release: Zimbabweans satisfied with voter registration but doubtful about the Electoral Commission: 7 June 2018: available at < http://afrobarometer.org/sites/default/files/press-release/Zimbabwe/zim_r7_pr3_zec.pdf>

Majority (82%) did not experience challenges with voter registration, 2% said the registration took too long, 1% proof of residence was a challenge and 1% said distance to the registration centre too long.

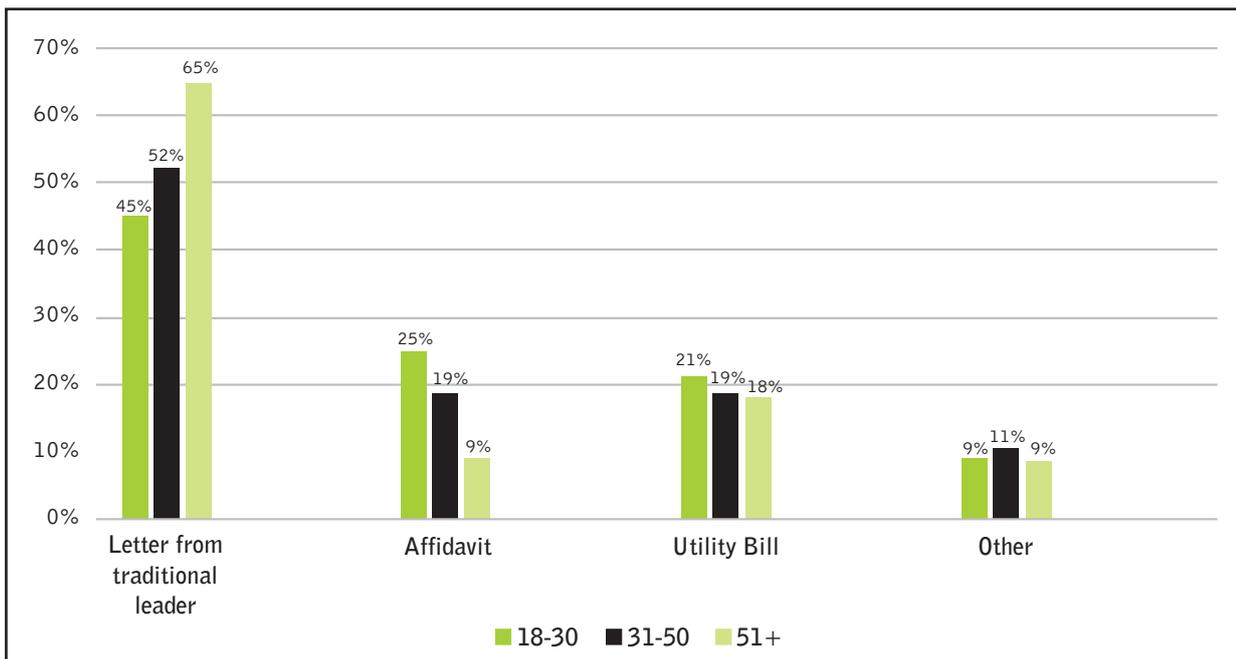

Identification used

In terms of identification used to register, 49% used synthetic national identification cards, 40% used metal ID, 6% used green waiting pass and 5% used a valid Zimbabwean passport as identification to register.

Proof of residence

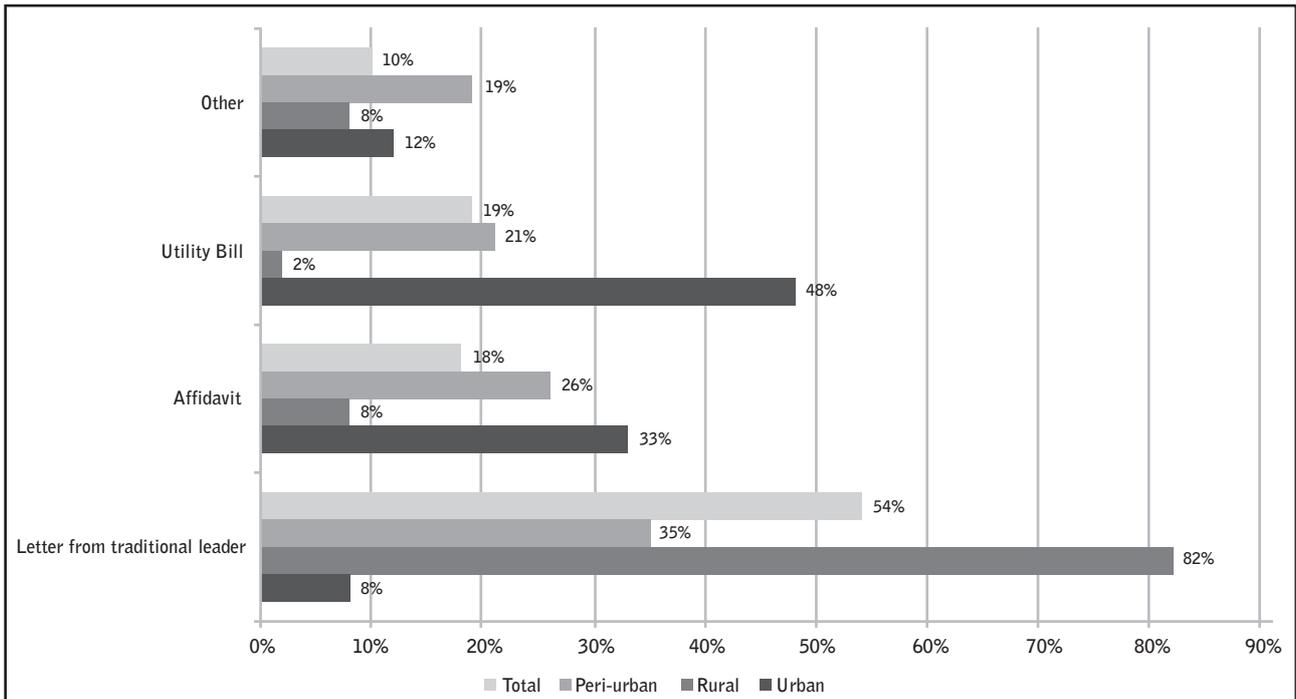

The Electoral Law provides that registrants must provide proof of residence in order to register. 54% used a letter from the traditional leader, because more than two thirds of the population of Zimbabwe resides in the rural areas. 19% used a utility bill and 18% used the affidavit as proof of residence. Analysis by age reflects that letter from a traditional leader was mostly used as proof of residence by all age categories.

Chart 51: Proof of residence age

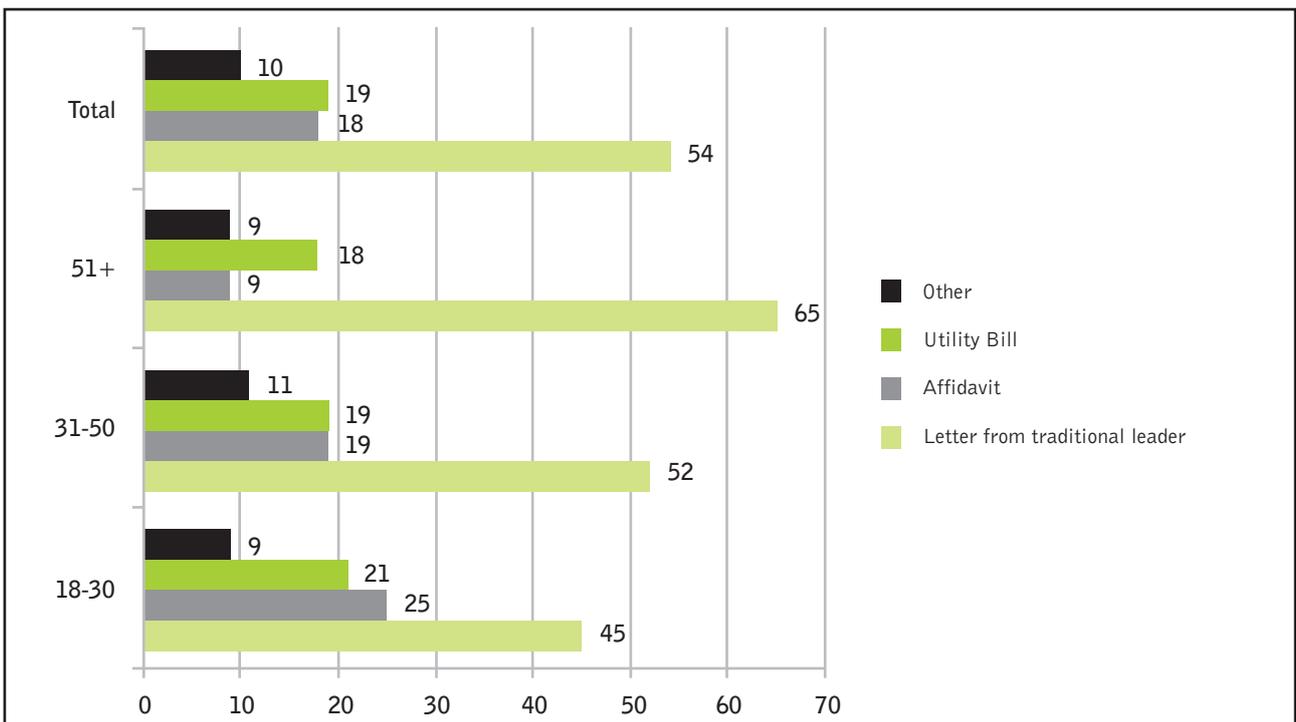

Analysis by location indicates that most from the rural areas are prone to use the letter from the traditional leader (82%) as proof of residence. The use of the utility bill (46%) and the affidavit (33%) proved to be common for urban dwellers (See Graph below)

Chart 52: Proof of Residence- Location

Across all age categories, the letter from the traditional leader was mostly used as proof of residence.

Chart 53: Proof of residence age

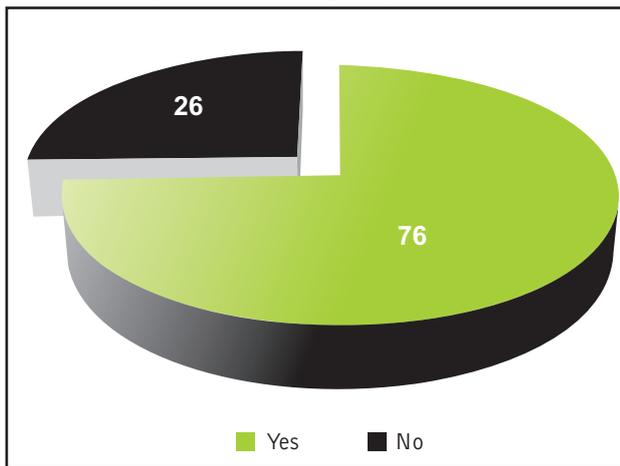

Inspection of the Provisional Voters' Roll

Inspection of the provisional voters' roll (PVR) was conducted between 19 and 29 May 2018. The ZEC opened 10,807 inspection and 2,019 registration centres¹⁴ for the 11 day inspection period. 76% of respondents are reported to have checked or verified their details during the inspection period, see graph below.

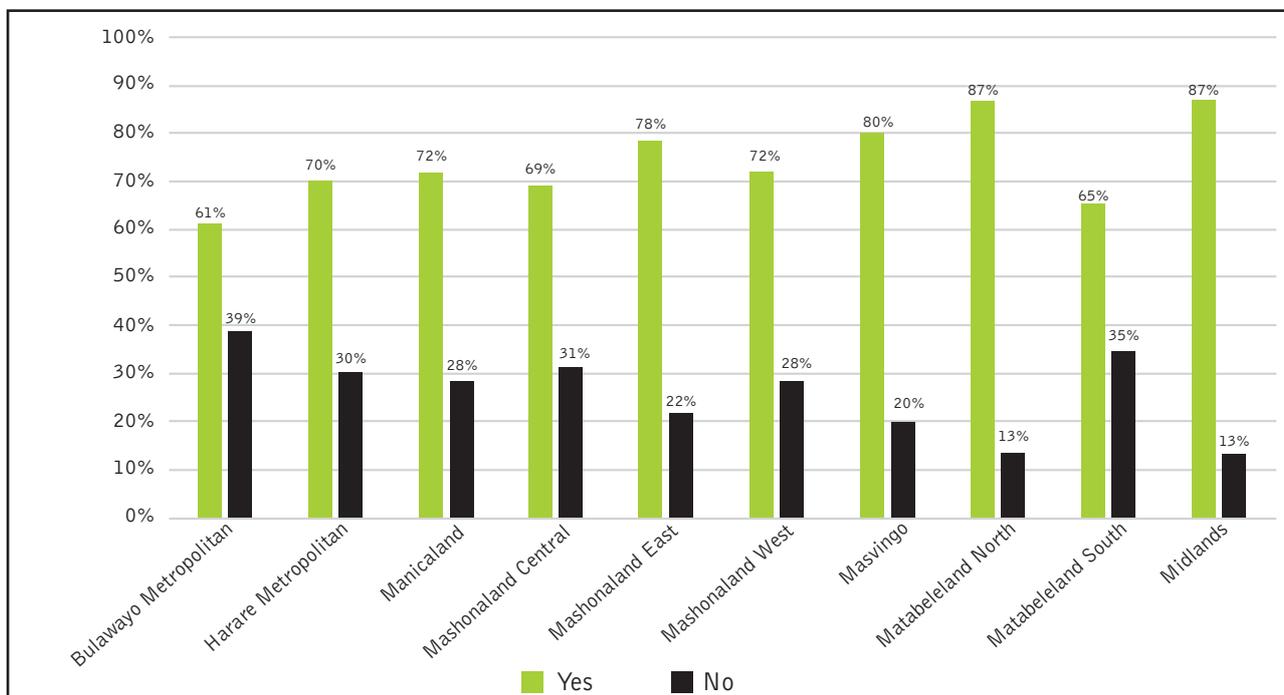

¹⁴Brief by the Chairperson of the Zimbabwe Electoral Commission to Local and Foreign Observers for the 2018 Harmonized Elections at Harare International Conference Centre (HICC): 13 July 2018

Chart 54:
Check/ verify details during inspection of the PVR

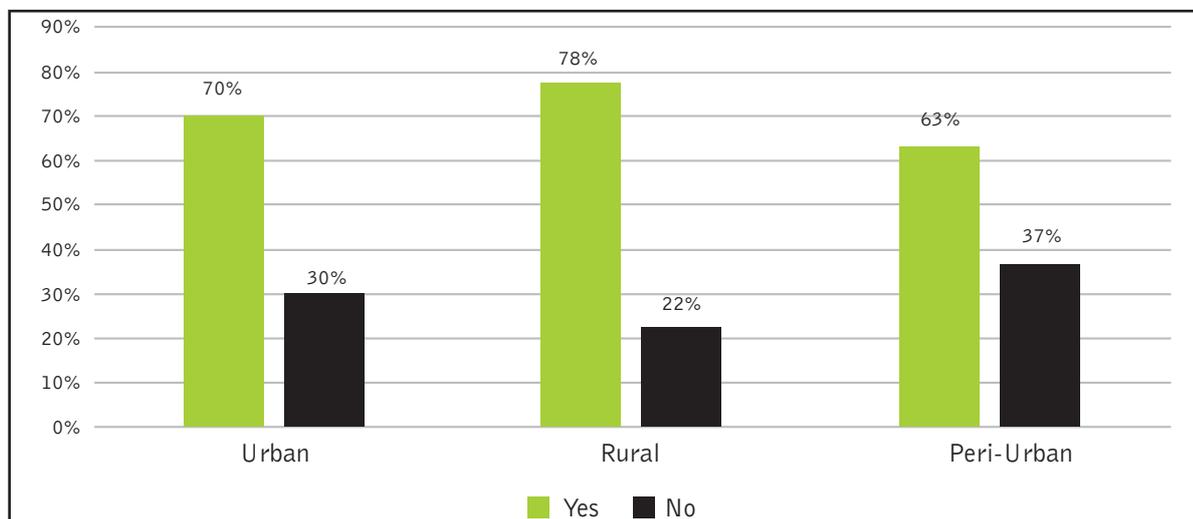

Analysis by province shows that most of the respondents checked and verified their details during inspection of the PVR. Matebeleland North and Midlands have the highest percentage of respondents, at 68% who checked or verified their details during inspection. The bottom 3 provinces are Bulawayo, Matebeleland North and Mashonaland Central who have 61%, 65% and 69% respectively, who checked or verified their details. Comparing these statistics with those from the ZEC is difficult as they did not release inspection data which was aggregated by province, gender, age, ward, constituency, location etc.

Chart 55: Check or verify details during inspection of the PVR

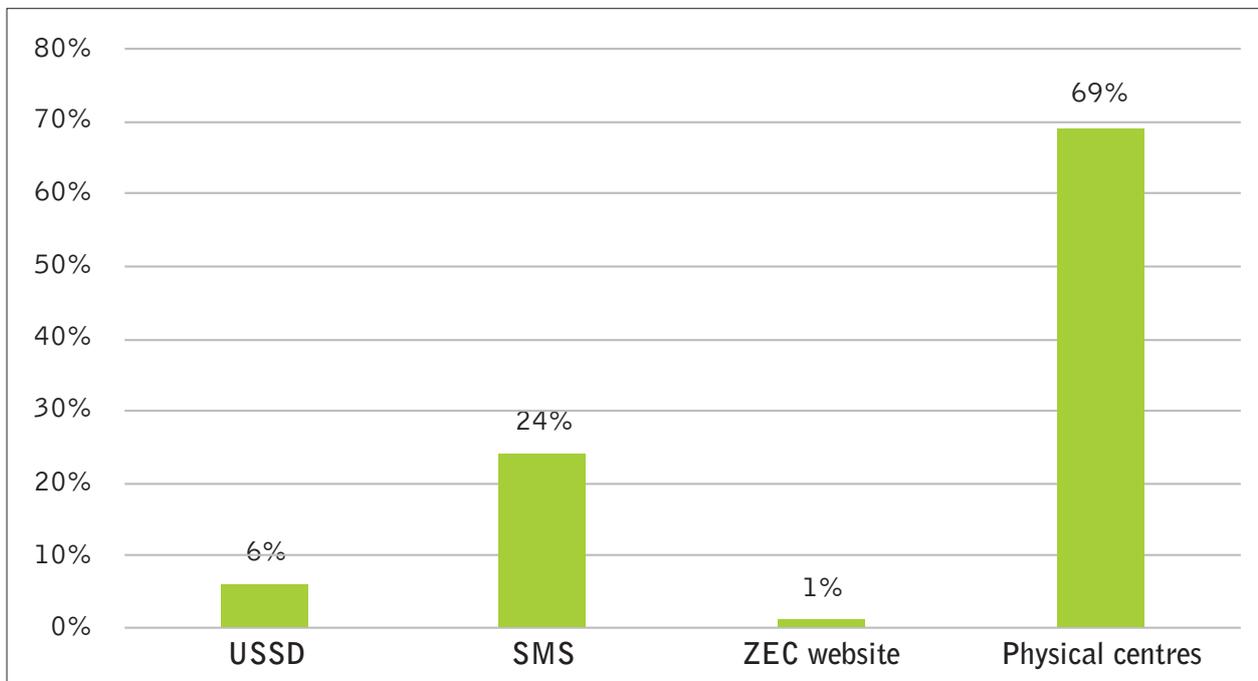

More registrants (78%) residing in the rural areas checked/ verified their details during the inspection period.

Chart 56: Check/ verify details location

During inspection of the PVR, in addition to the 10,807 physical inspection centres, the ZEC used Unstructured Supplementary Service Data (USSD) platform *265# for registrants to check their details using mobile phones. ZEC sent 3,256 440 bulk Short Message Services (SMSs) to registrants, and registrants also used bvrinspection.zec.org.zw or the new ZEC website www.zec.org.zw to check their details on line. 69% of the respondents visited inspection centres to verify their details, 24% used SMS, 6% USSD and 1% used the ZEC website.

First time voters'

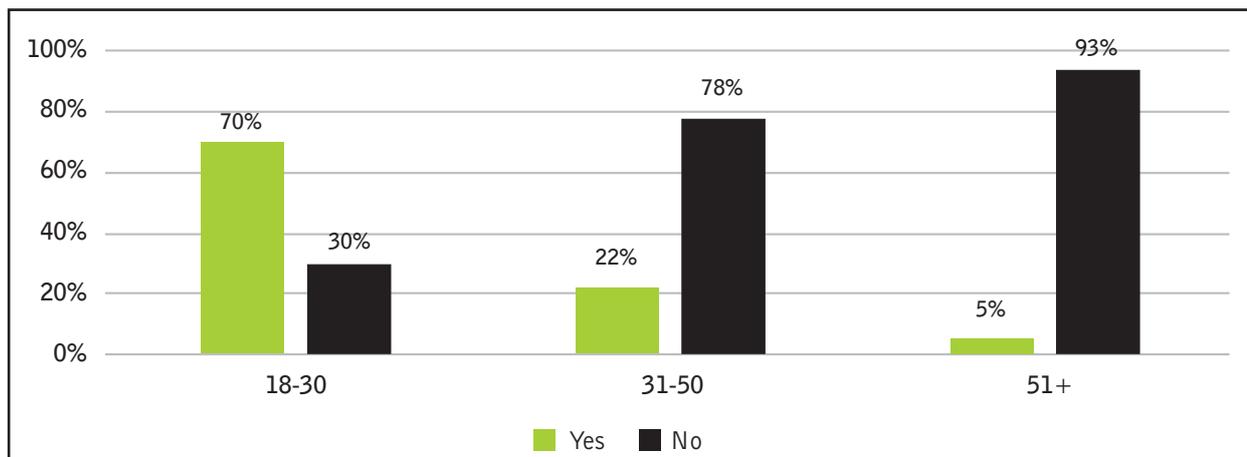

ZESN also sought to assess the percentage of first time voters', nearly a third (31%) of the respondents will be voting for the first time during the 2018 Harmonised elections (See graph below).

Chart 58: First time voters

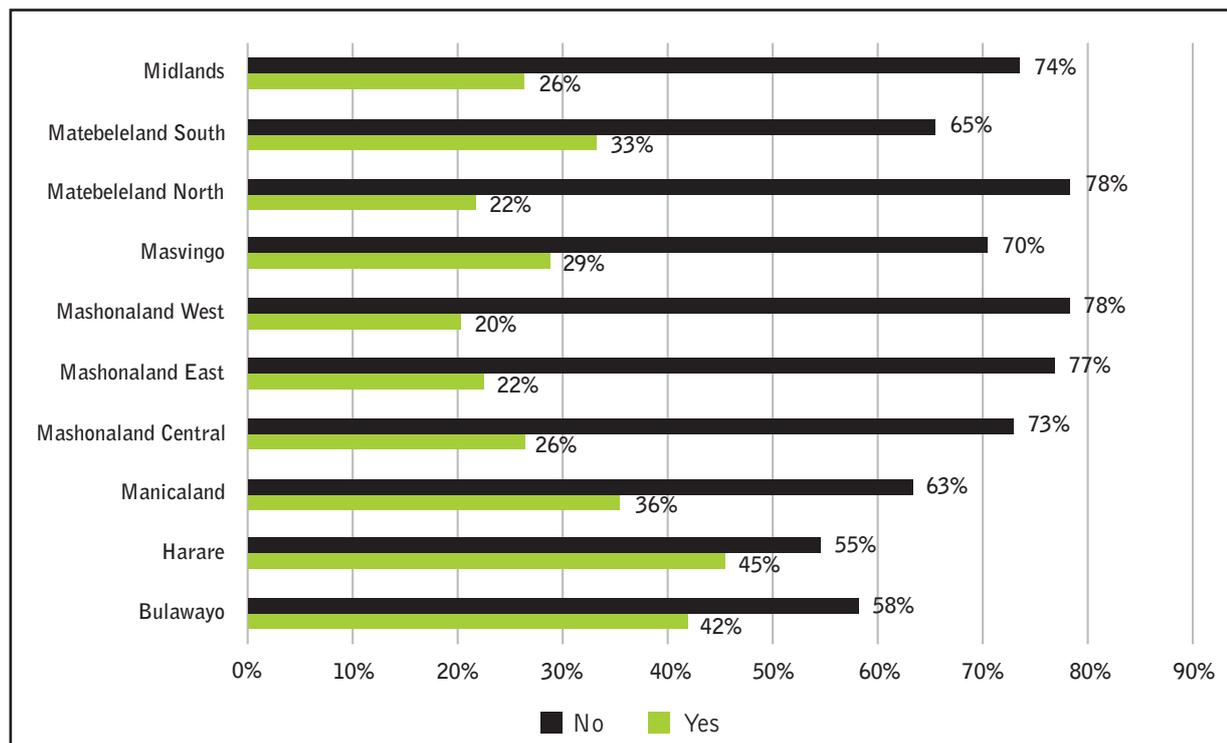

Analysis by age shows that a majority (70%) of those in the 18-30 age category are first time voters'. The ZEC should consider targeted voter education programmes for first time voter' in the 18-30 category.

Chart 59: First time voters age

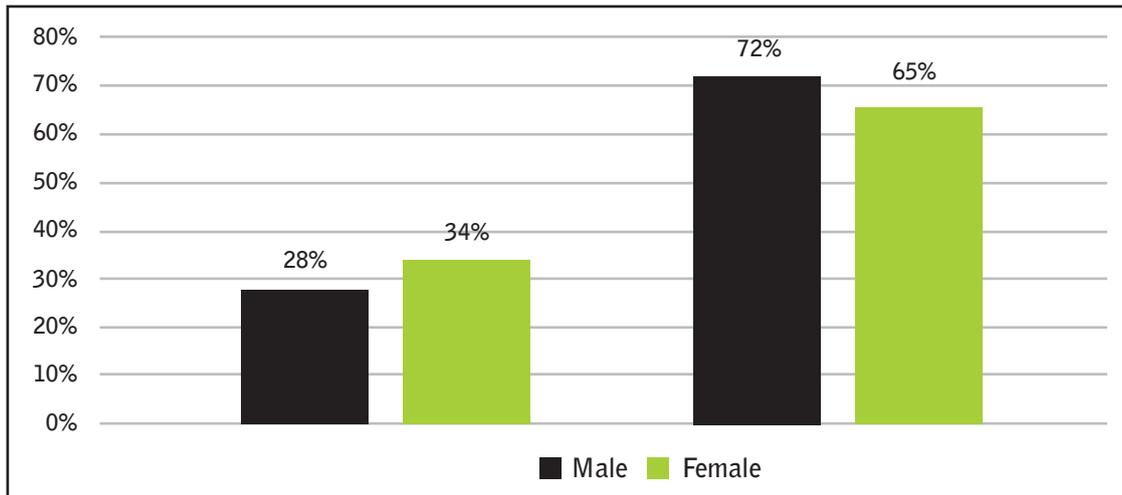

Across province, Harare (45%) has more first time voters, Bulawayo coming second with 42% first time voters.

Chart 60 : First time voters- Province

More females (34%) will be voting for the first time during the 2018 harmonised elections.

Conclusions and Recommendations

ZESN acknowledges that no voters' roll is perfect, however the 2018 FVR is better than the 2013 PVR. Though registration rates for youth and urban voters improved from the 2013 PVR, however the youth still lag behind compared to registration rates for the older age groups, and urban lags behind compared to registration rates in the rural areas. The ZESN therefore makes the following recommendations:

- The ZEC should equitably distribute BVR kits to urban and rural areas;
- The ZEC and civic organizations should conduct more targeted voter education and voter registration activities targeting young voters between the ages of 18 to 32;
- The ZEC should provide more timely detailed registration information in electronic format for each phase of the BVR process;
- The ZEC should compare registration information across voters' rolls to identify possible errors;
- The ZEC should also explain what constitutes a material or immaterial error on the voters' roll, in order to prevent disenfranchisement of registrants whose registration details might have errors
- The ZEC should consider posting voters' rolls outside inspection centres to allow for public scrutiny for removal of ineligible voters' by reason of non-residence
- The ZEC should avail the electronic final voters' roll that will be used on Election Day in order to build confidence amongst stakeholders
